Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 18·9 and 14·2; City of Dublin 15·6 and 13·0; Borough of Dun Laoghaire 16·5 and 15·0; Cork 31·6 and 17·9; Limerick 30·5 and 21·3; and Waterford 26·1 and 14·5.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·7 per 1,000. Among the 49 deaths from all causes for Cork was one from measles; and one of the 14 deaths for Waterford and the 11 for Dundalk was from whooping cough.

City of Dublin.—The number of births registered during the week was 212—119 boys and 93 girls. Exclusive of those numbering 31, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 181, representing a rate of 19·2 per 1,000.

The number of deaths registered was 176—98 males and 78 females. Of the total 29 related to persons belonging to other localities,* so that the actual number of deaths for the City was 147, representing a rate of 15·6 per 1,000.

There were 6 deaths from the principal epidemic diseases, comprising one from scarlet fever, one from whooping cough, and 4 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from scarlet fever were 0, 0 and one; from whooping cough 2, one and 0; and from diarrhoea and enteritis of children under 2 years of age 7, 0 and 4.

Tuberculous disease caused 13 deaths (12 of which were from pulmonary tuberculosis, and one from tuberculous meningitis), as against 9, 17 and 10 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were caused by cancer, and 36 by diseases of the heart.

There were 3 deaths from pneumonia, comprising 2 from broncho-pneumonia and one from pneumonia (unspecified). Bronchitis caused 7 deaths.

Five accidental deaths were registered, one of which was due to burns and one to drowning. There was also one death by suicide.

Among the deaths of infants under one year of age one was due to convulsions, 2 to pneumonia, 4 to diarrhoea and enteritis, 4 to congenital malformations, 3 to congenital debility, 6 to premature birth, and 2 to injury at birth.

Twenty-five of the deaths recorded for the City during the week were those of children under 5 years of age, 22 being infants under one year, 10 of whom were under one month old, and 56 were those of persons aged 65 years and upwards, of whom 49 were aged 70 years or over.

Of the 147 deaths recorded, 75 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland and Scotland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 17·5 per 1,000 of the population, and for Derry 9·8.

The average death rate for 16 principal towns of Scotland was 15·9 per 1,000 persons living, the rate for Glasgow being 15·7, and for Edinburgh 16·2.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 4th January, 1941, for the Principal Towns of Eire, with the METEOROLOGY for the week; also similar particulars for BELFAST, DERRY, LONDON, EDINBURGH and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is as estimated at 1st January, 1940, and that for Derry is according to the Census of 1937. The population shown for London is the estimated resident population at the middle of 1938. The populations for Glasgow and Edinburgh are those estimated to the middle of 1941 (provisional). (c) Return not received.

TABLE II.—Deaths registered during the week ended Saturday, 4th January, 1941, for the City of Dublin and the County Borough of Cork* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

[illegible]

* See note at foot of fourth page.

TABLE III.—Cases of infectious diseases notified in the undermentioned urban areas during the week ended Saturday, 4th January, 1941, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report.

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 18·9 and 15·3; City of Dublin 17·0 and 13·7; Borough of Dun Laoghaire 15·3 and 15·3; Cork 27·1 and 21·1; Limerick 29·2 and 21·9; and Waterford 16·8 and 17·7.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·6 per 1,000. Among the 42 deaths from all causes for Cork was one from measles; and the 23 deaths for Limerick included one from whooping cough and 2 from diarrhoea and enteritis of children under 2 years of age.

City of Dublin.—The number of births registered during the week was 260—134 boys and 126 girls. Exclusive of those numbering 40, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 220, representing a rate of 23·3 per 1,000.

The number of deaths registered was 179—83 males and 96 females. Of the total 19 related to persons belonging to other localities,* so that the actual number of deaths for the City was 160, representing a rate of 17·0 per 1,000.

There were 4 deaths from the principal epidemic diseases, comprising 2 from whooping cough, one from diphtheria, and one from diarrhoea and enteritis of a child under 2 years of age. In the three preceding weeks deaths from whooping cough were one, 0 and one; from diphtheria 3, 2 and 0; and from diarrhoea and enteritis of children under 2 years of age 0, 4 and 4.

Tuberculous disease caused 17 deaths (15 of which were from pulmonary tuberculosis, and 2 from tuberculous meningitis), as against 17, 10 and 13 from all forms of tuberculosis in the three preceding weeks.

Sixteen deaths were caused by cancer, and 33 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 5 from broncho-pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 19 deaths.

One accidental death was registered.

Among the deaths of infants under one year of age 2 were due to whooping cough, one to convulsions, one to bronchitis, one to pneumonia, one to diarrhoea and enteritis, 3 to congenital malformations, 2 to congenital debility, 8 to premature birth, and 4 to injury at birth.

Twenty-nine of the deaths recorded for the City during the week were those of children under 5 years of age, 25 being infants under one year, 17 of whom were under one month old, and 66 were those of persons aged 65 years and upwards, of whom 54 were aged 70 years or over.

Of the 160 deaths recorded, 77 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 17·0 per 1,000 of the population, and for Derry 12·0.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 11th January, 1941, for the Principal Towns of Eire, with the METEOROLOGY for the week; also similar particulars for BELFAST, DERRY, LONDON, EDINBURGH and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is as estimated at 1st January, 1940, and that for Derry is according to the Census of 1937. The population shown for London is the estimated resident population as the middle of 1938. The populations for Glasgow and Edinburgh are those estimated to the middle of 1941 (provisional). (c) Return not received.

TABLE II.—Deaths registered during the week ended Saturday, 11th January, 1941, for the City of Dublin and the County Borough of Cork* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report.

Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 21·0 and 17·3; City of Dublin 17·0 and 15·0; Borough of Dun Laoghaire 26·7 and 17·8; Cork 45·2 and 28·1; Limerick 29·2 and 24·5; and Waterford 16·8 and 17·7.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·8 per 1,000. Among the 70 deaths from all causes for Cork were one from measles, one from diarrhoea and enteritis of a child under 2 years of age, and 10 from influenza.

City of Dublin.—The number of births registered during the week was 217—106 boys and 111 girls. Exclusive of those numbering 53, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 164, representing a rate of 17·4 per 1,000.

The number of deaths registered was 179—88 males and 91 females. Of the total 23 related to persons belonging to other localities, and the deaths of 4 persons belonging to the City were registered in adjoining districts,* so that the actual number of deaths for the City was 160, representing a rate of 17·0 per 1,000.

There were 9 deaths from the principal epidemic diseases, comprising one from whooping cough, and 8 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from whooping cough were 0, one and 2; and from diarrhoea and enteritis of children under 2 years of age 4, 4 and one.

Tuberculous disease caused 8 deaths (7 of which were from pulmonary tuberculosis, and one from tuberculous meningitis), as against 10, 13 and 17 from all forms of tuberculosis in the three preceding weeks.

Fifteen deaths were caused by cancer, and 36 by diseases of the heart.

There were 5 deaths from broncho-pneumonia. Bronchitis caused 12 deaths.

Three accidental deaths were registered, 2 of which were due to burns and one to injuries caused by a motor-vehicle. There was also one death by suicide.

Among the deaths of infants under one year of age one was due to whooping cough, one to pneumonia, 7 to diarrhoea and enteritis, 3 to congenital malformations, 2 to congenital debility, one to premature birth, and one to injury at birth.

Twenty-four of the deaths recorded for the City during the week were those of children under 5 years of age, 18 being infants under one year, 6 of whom were under one month old, and 67 were those of persons aged 65 years and upwards, of whom 53 were aged 70 years or over.

Of the 160 deaths recorded, 83 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 21·0 per 1,000 of the population, and for Derry 18·5.

Scotland.—The average death rate for 16 principal towns of Scotland was 22·1 per 1,000 persons living, the rate for Glasgow being 26·0, and for Edinburgh 21·0.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 18th January, 1941, for the Principal Towns of Eire, with the METEOROLOGY for the week; also similar particulars for BELFAST, DERRY, LONDON, EDINBURGH and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate per 1,000 persons re-presented by | | BIRTHS | | DEATHS | | | | | | | | | | | | | | | | CAUSED BY | | | | | | | | | | METEOROLOGY | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

(a) See note at foot of fourth page. (b) According to the Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is as estimated at 1st January, 1940, and that for Derry is according to the Census of 1937. The population shown for London is the estimated resident population at the middle of 1938. The populations for Glasgow and Edinburgh are those estimated to the middle of 1941 (provisional). (c) Return not received.

TABLE II.—Deaths registered during the week ended Saturday, 18th January, 1941, for the City of Dublin and the County Borough of Cork* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

[illegible]

* See note at foot of fourth page. (a) Typhoid fever.

TABLE III.—Cases of infectious diseases notified in the undermentioned urban areas during the week ended Saturday, 18th January, 1941, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

| AREAS | Week ended | | Typhoid fever | Typhus, Pyrexia and Smallpox | Measles | Scarlet fever | Whooping cough | Diphtheria (including membranous croup) | Erysipelas | Puerperal fever | Diarrhoeal diseases | Dysentery and Malaria | Ophthalmia neonatorum | Acute primary pneumonia and Acute influenza pneumonia | Cerebro-spinal fever | Acute poliomyelitis and encephalitis lethargica | Varicella | Tuberculosis | Total |

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report.

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 20·8 and 19·9; City of Dublin 18·2 and 17·0; Borough of Dun Laoghaire 12·7 and 17·8; Cork 35·5 and 34·9; Limerick 36·8 and 31·4; and Waterford 14·9 and 18·7.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·5 per 1,000. Among the 4 deaths from all causes for Dundalk was one from whooping cough, and the 5 deaths for Drogheda included one from diphtheria.

City of Dublin.—The number of births registered during the week was 253—140 boys and 113 girls. Exclusive of those numbering 33, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 220, representing a rate of 23·3 per 1,000.

The number of deaths registered was 191—96 males and 95 females. Of the total 22 related to persons belonging to other localities, and the deaths of 3 persons belonging to the City were registered in adjoining districts,* so that the actual number of deaths for the City was 172, representing a rate of 18·2 per 1,000.

There were 5 deaths from the principal epidemic diseases, comprising one from whooping cough, 2 from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from whooping cough were one, 2 and one; from diphtheria 0, one and 0; and from diarrhoea and enteritis of children under 2 years of age 4, one and 8.

Tuberculous disease caused 16 deaths (13 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from disseminated tuberculosis), as against 13, 17 and 8 from all forms of tuberculosis in the three preceding weeks.

Twenty-one deaths were caused by cancer, and 43 by diseases of the heart.

There were 18 deaths from pneumonia, comprising 3 from broncho-pneumonia, 5 from lobar pneumonia and 10 from pneumonia (unspecified). Bronchitis caused 17 deaths.

Two deaths from violence were registered.

Among the deaths of infants under one year of age one was due to diphtheria, one to bronchitis, 4 to pneumonia, 2 to diarrhoea and enteritis, one to congenital malformation, 3 to congenital debility, and 4 to premature birth.

Twenty-two of the deaths recorded for the City during the week were those of children under 5 years of age, 17 being infants under one year, 7 of whom were under one month old, and 87 were those of persons aged 65 years and upwards, of whom 69 were aged 70 years or over.

Of the 172 deaths recorded, 98 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 17·5 per 1,000 of the population, and for Derry 21·8.

Scotland.—The average death rate for 16 principal towns of Scotland was 22·7 per 1,000 persons living, the rate for Glasgow being 25·1, and for Edinburgh 22·3.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE III.—Cases of infectious diseases notified in the undermentioned urban areas during the week ended Saturday, 25th January, 1941, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

| AREAS | Week ended | Typhoid fever | Typhus, Pyrexia and Smallpox | Measles | Scarlet fever | Whooping cough | Diphtheria (including membranous croup) | Erysipelas | Puerperal fever | Diarrhoeal diseases | Dysentery and Malaria | Ophthalmia neonatorum | Acute primary pneumonia and Acute influenza pneumonia | Cerebro-spinal fever | Acute poliomyelitis and encephalitis lethargica | Varicella | Tuberculosis | Total |

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 20·8 and 20·4 ; City of Dublin 17·0 and 17·3 ; Borough of Dun Laoghaire 19·1 and 18·5 ; Cork 32·9 and 35·2 ; Limerick 26·7 and 30·5 ; and Waterford 22·4 and 17·7.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·7 per 1,000. Among the 51 deaths from all causes for Cork were one from measles and 4 from diarrhoea and enteritis of children under 2 years of age.

City of Dublin.—The number of births registered during the week was 294—149 boys and 145 girls. Exclusive of those numbering 40, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 254, representing a rate of 26·9 per 1,000.

The number of deaths registered was 177—90 males and 87 females. Of the total 20 related to persons belonging to other localities, and the deaths of 3 persons belonging to the City were registered in adjoining districts,* so that the actual number of deaths for the City was 160, representing a rate of 17·0 per 1,000.

There were three deaths from the principal epidemic diseases, comprising one from whooping cough, one from diphtheria, and one from diarrhoea and enteritis of a child under 2 years of age. In the three preceding weeks deaths from whooping cough were 2, one and one ; from diphtheria one, 0 and 2 ; and from diarrhoea and enteritis of children under 2 years of age one, 8 and 2.

Tuberculous disease caused 11 deaths (9 of which were from pulmonary tuberculosis, one from spinal tuberculosis, and one from disseminated tuberculosis), as against 17, 8 and 16 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 25 by diseases of the heart.

There were 16 deaths from pneumonia, comprising 5 from broncho-pneumonia, 5 from lobar pneumonia and 6 from pneumonia (unspecified). Bronchitis caused 21 deaths.

Five accidental deaths were registered, one of which was due to burns, one to drowning and one to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age one was due to whooping cough, one to bronchitis, 8 to pneumonia, one to diarrhoea and enteritis, 2 to congenital malformation, and 4 to premature birth.

Twenty-four of the deaths recorded for the City during the week were those of children under 5 years of age, 19 being infants under one year, 6 of whom were under one month old, and 68 were those of persons aged 65 years and upwards, of whom 46 were aged 70 years or over.

Of the 160 deaths recorded, 86 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs ; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 17·5 per 1,000 of the population, and for Derry 24·0.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 1st February, 1941, for the Principal Towns of Ireland, with the METEOROLOGY for the week; also similar particulars for BELFAST, DERRY, LONDON, EDINBURGH and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | BIRTHS | | DEATHS | | | | | | | | | | | | | | | | | | | | CAUSED BY | | | | | | | | | | METEOROLOGY | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

(a) See note at foot of fourth page. (b) According to the Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is as estimated at 1st January, 1940, and that for Derry is according to the Census of 1937. The population shown for London is the estimated resident population at the middle of 1938. The populations for Glasgow and Edinburgh are those estimated to the middle of 1941 (provisional). (c) Return not received.

TABLE II.—Deaths registered during the week ended Saturday, 1st February, 1941, for the City of Dublin and the County Borough of Cork* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report.

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 18·8 and 20·4; City of Dublin 17·9 and 17·5; Borough of Dun Laoghaire 10·2 and 17·2; Cork 33·6 and 36·8; Limerick 17·8 and 27·6; and Waterford 20·5 and 18·7.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·7 per 1,000. Among the 52 deaths from all causes for Cork were one from measles and one from diarrhoea and enteritis of a child under 2 years of age; and the 11 deaths for Waterford included one from measles, one from whooping cough and 2 from diarrhoea and enteritis of children under 2 years of age.

City of Dublin.—The number of births registered during the week was 233—122 boys and 111 girls. Exclusive of those numbering 40, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 193, representing a rate of 20·5 per 1,000.

The number of deaths registered was 191—93 males and 98 females. Of the total 23 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district,* so that the actual number of deaths for the City was 169, representing a rate of 17·9 per 1,000.

There was one death from diarrhoea and enteritis of a child under 2 years of age. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years of age were 8, 2 and one.

Tuberculous disease caused 25 deaths (19 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 3 from other forms of tuberculous disease), as against 8, 16 and 11 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were caused by cancer, and 32 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 4 from broncho-pneumonia, 2 from lobar pneumonia and 5 from pneumonia (unspecified). Bronchitis caused 20 deaths.

Two deaths from violence were registered, one of which was due to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age 2 were due to convulsions, 2 to pneumonia, one to diarrhoea and enteritis, 4 to congenital malformations, 4 to congenital debility and one to premature birth.

Twenty-three of the deaths recorded for the City during the week were those of children under 5 years of age, 22 being infants under one year, 8 of whom were under one month old, and 68 were those of persons aged 65 years and upwards, of whom 51 were aged 70 years or over.

Of the 169 deaths recorded, 100 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 16·1 per 1,000 of the population, and for Derry 24·0.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE III.—Cases of infectious diseases notified in the undermentioned urban areas during the week ended Saturday, 8th February, 1941, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

| AREAS | Week ended | | Typhoid fever | Typhus, Pyrexia and Smallpox | Measles | Scarlet fever | Whooping cough | Diphtheria (including membranous croup) | Erysipelas | Puerperal fever | Diarrhoeal diseases | Dysentery and Malaria | Ophthalmia neonatorum | Acute primary pneumonia and Acute influenza pneumonia | Cerebro-spinal fever | Acute poliomyelitis and encephalitis lethargica | Varicella | Tuberculosis | Total |

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 16·1 and 19·1; City of Dublin 15·1 and 17·1; Borough of Dun Laoghaire 20·3 and 15·6; Cork 20·7 and 30·7; Limerick 11·4 and 23·2; and Waterford 18·6 and 19·1.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·3 per 1,000.

City of Dublin.—The number of births registered during the week was 230—127 boys and 103 girls. Exclusive of those numbering 43, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 187, representing a rate of 19·8 per 1,000.

The number of deaths registered was 165—74 males and 91 females. Of the total 24 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district,* so that the actual number of deaths for the City was 142, representing a rate of 15·1 per 1,000.

There were 4 deaths from the principal epidemic diseases comprising one from whooping cough, 2 from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age. In the three preceding weeks deaths from whooping cough were one, one and 0; from diphtheria 2, one and 0; and from diarrhoea and enteritis of children under 2 years of age 2, one and one.

Tuberculous disease caused 17 deaths (13 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 16, 11 and 25 from all forms of tuberculosis in the three preceding weeks.

Six deaths were caused by cancer, and 35 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 5 from broncho-pneumonia, one from lobar pneumonia and 3 from pneumonia (unspecified). Bronchitis caused 13 deaths.

One accidental death was registered.

Among the deaths of infants under one year of age one was due to meningitis, 2 to bronchitis, 2 to pneumonia, one to diarrhoea and enteritis, 4 to congenital malformations, 5 to congenital debility and 11 to premature birth.

Twenty-eight of the deaths recorded for the City during the week were those of children under 5 years of age, 26 being infants under one year, 18 of whom were under one month old, and 62 were those of persons aged 65 years and upwards, of whom 50 were aged 70 years or over.

Of the 142 deaths recorded, 90 occurred in hospitals or other public institutions.

CAUSES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV. the number of cases of certain diseases notified in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 19·0 per 1,000 of the population, and for Derry 19·6.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and other infectious diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 15th February, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY,

| PRINCIPAL TOWNS | POPULA- TION (b) | Annual Rate (c) per 1,000 persons | | | BIRTHS | DEATHS | Under 1 year of age | 65 years and upwards | Principal epidemic diseases | | | | | | | | | | CAUSED BY | | | | | | | | | | Inquest Cases | In public institutions | Number uncertified | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

(a) See note at foot of fourth page. (b) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1940. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (c) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II.—Deaths registered during the week ended Saturday, 15th February, 1941, for the City of Dublin and the County Borough of Cork* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

| Pneumonia | 16 | 15 | 18 | 2 | 5 | 1 | 14 |

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 16·6 and 18·1; City of Dublin 17·7 and 16·9; Borough of Dun Laoghaire 16·5 and 16·5; Cork 13·6 and 25·2; Limerick 11·4 and 16·8; and Waterford 24·2 and 21·4.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·8 per 1,000. Among the 21 deaths from all causes for Cork were one from whooping cough and one from diarrhoea and enteritis of a child under 2 years of age; and the 9 for Limerick included 4 from diarrhoea and enteritis of children under 2 years of age.

City of Dublin.—The number of births registered during the week was 228—114 boys and 114 girls. Exclusive of those numbering 25, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 203, representing a rate of 21·5 per 1,000.

The number of deaths registered was 191—91 males and 100 females. Of the total, 25 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district,* so that the actual number of deaths for the City was 167, representing a rate of 17·7 per 1,000.

There were 6 deaths from the principal epidemic diseases comprising 2 from diphtheria and 4 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were one, 0 and 2; and from diarrhoea and enteritis of children under 2 years of age one, one and one.

Tuberculous disease caused 17 deaths (15 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and one from tuberculous peritonitis), as against 11, 25 and 17 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 36 by diseases of the heart.

There were 13 deaths from pneumonia, comprising 11 from broncho-pneumonia, one from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused 13 deaths.

Two accidental deaths were registered. There was also one death by suicide.

Among the deaths of infants under one year of age one was due to bronchitis, 4 to pneumonia, 4 to diarrhoea and enteritis, one to congenital malformations, 6 to congenital debility, 3 to premature birth and one to injury at birth.

Thirty-one of the deaths recorded for the City during the week were those of children under 5 years of age, 23 being infants under one year, 7 of whom were under one month old, and 54 were those of persons aged 65 years and upwards, of whom 45 were aged 70 years or over.

Of the 167 deaths recorded, 89 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 16·2 per 1,000 of the population, and for Derry 19·6.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 22nd February, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY,

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate (c) per 1,000 persons | | BIRTHS | | DEATHS | | DEATHS | | DEATHS | | CAUSED BY | | | | | | | | | | | | | | | Inquest Cases | In public institutions | Number uncertified | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

(a) See note at foot of fourth page. (b) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1940. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (c) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II.—Deaths registered during the week ended Saturday, 22nd February, 1941, for the City of Dublin and the County Borough of Cork* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

| Pneumonia | 15 | 18 | 14 | 2 | 5 | • | 11 |

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report.

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 18·5 and 17·5; City of Dublin 18·0 and 17·2; Borough of Dun Laoghaire 16·5 and 15·9; Cork 17·4 and 21·3; Limerick 16·5 and 14·3; and Waterford 22·4 and 21·4.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·3 per 1,000. Among the 27 deaths from all causes for Cork was one from measles; and the 7 deaths for Drogheda included one from whooping cough.

City of Dublin.—The number of births registered during the week was 312—167 boys and 145 girls. Exclusive of those numbering 53, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 259, representing a rate of 27·5 per 1,000.

The number of deaths registered was 194—90 males and 104 females. Of the total, 24 related to persons belonging to other localities,* so that the actual number of deaths for the City was 170, representing a rate of 18·0 per 1,000.

There were 2 deaths from the principal epidemic diseases, comprising one from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age. In the three preceding weeks deaths from diphtheria were 0, 2 and 2, and from diarrhoea and enteritis of children under 2 years of age one, one and 4.

Tuberculous disease caused 21 deaths (20 of which were from pulmonary tuberculosis, and one from disseminated tuberculosis), as against 25, 17 and 17 from all forms of tuberculosis in the three preceding weeks.

Sixteen deaths were caused by cancer, and 34 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 3 from broncho-pneumonia, 3 from lobar pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 9 deaths.

Four accidental deaths were registered, 2 of which were due to burns.

Among the deaths of infants under one year of age, one was due to tuberculosis, one to convulsions, one to bronchitis, 4 to pneumonia, one to diarrhoea and enteritis, 4 to congenital malformations, 6 to congenital debility, and 3 to premature birth.

Twenty-nine of the deaths recorded for the City during the week were those of children under 5 years of age, 25 being infants under one year, 12 of whom were under one month old, and 62 were those of persons aged 65 years and upwards, of whom 50 were aged 70 years or over.

Of the 170 deaths recorded, 91 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 23·0 per 1,000 of the population, and for Derry 15·3.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE III.—Cases of infectious diseases notified in the undermentioned urban areas during the week ended Saturday, 1st March, 1941, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

| AREAS | Week ended | Typhoid fever | Typhus, Pyrexia and Smallpox | Measles | Scarlet fever | Whooping cough | Diphtheria (including membranous croup) | Erysipelas | Puerperal fever | Diarrhoeal diseases | Dysentery and Malaria | Ophthalmia neonatorum | Acute primary pneumonia and Acute influenza pneumonia | Cerebro-spinal fever | Acute poliomyelitis and encephalitis lethargica | Varicella | Tuberculosis | Total |

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 18·1 and 17·3; City of Dublin 18·4 and 17·3; Borough of Dun Laoghaire 16·5 and 17·5; Cork 16·8 and 17·1; Limerick 12·7 and 13·0; and Waterford 18·6 and 21·0.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·3 per 1,000. Among the 26 deaths from all causes for Cork was one from measles.

City of Dublin.—The number of births registered during the week was 276—150 boys and 126 girls. Exclusive of those numbering 33, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 243, representing a rate of 25·8 per 1,000.

The number of deaths registered was 193—85 males and 108 females. Of the total, 20 related to persons belonging to other localities,* and the death of one person belonging to the City was registered in an adjoining district, so that the actual number of deaths for the City was 174, representing a rate of 18·4 per 1,000.

There were 2 deaths from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years of age were one, 4 and one.

Tuberculous disease caused 18 deaths (14 of which were from pulmonary tuberculosis, one from tuberculous meningitis and 3 from other forms of tuberculous disease), as against 17, 17 and 21 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 41 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 9 from broncho-pneumonia, one from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused 15 deaths,

Two accidental deaths were registered, one of which was due to burns.

Among the deaths of infants under one year of age, one was due to convulsions, 2 to bronchitis, 2 to pneumonia, 2 to diarrhoea and enteritis, 2 to congenital malformations, one to congenital debility, 9 to premature birth, and 4 to injury at birth.

Thirty-two of the deaths recorded for the City during the week were those of children under 5 years of age, 25 being infants under one year, 16 of whom were under one month old, and 73 were those of persons aged 65 years and upwards, of whom 63 were aged 70 years or over.

Of the 174 deaths recorded, 98 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 19·6 per 1,000 of the population, and for Derry 20·7.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report.

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 17·9 and 17·8; City of Dublin 17·5 and 17·9; Borough of Dun Laoghaire 15·3 and 16·2; Cork 19·4 and 16·8; Limerick 12·7 and 13·3; and Waterford 11·2 and 19·1.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·5 per 1,000. Among the 30 deaths from all causes for Cork was one from diphtheria, and the 6 deaths for Waterford included one from measles and one from diarrhoea and enteritis of a child under 2 years of age.

City of Dublin.—The number of births registered during the week was 279—133 boys and 146 girls. Exclusive of those numbering 48, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 231, representing a rate of 24·5 per 1,000.

The number of deaths registered was 176—85 males and 91 females. Of the total, 12 related to persons belonging to other localities,* and the death of one person belonging to the City was registered in an adjoining district, so that the actual number of deaths for the City was 165, representing a rate of 17·5 per 1,000.

There were 3 deaths from the principal epidemic diseases comprising one from whooping cough and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years of age were 4, one and 2. There were no deaths from whooping cough in the three previous weeks.

Tuberculous disease caused 18 deaths (17 of which were from pulmonary tuberculosis, and one from tuberculosis of the kidney), as against 17, 21 and 18 from all forms of tuberculosis in the three preceding weeks.

Fourteen deaths were caused by cancer, and 35 by diseases of the heart.

There were 13 deaths from pneumonia, comprising 7 from broncho-pneumonia, 3 from lobar pneumonia and 3 from pneumonia (unspecified). Bronchitis caused 11 deaths.

Three deaths from violence were registered, 2 of which were due to suicide and one to burns.

Among the deaths of infants under one year of age, one was due to convulsions, 6 to pneumonia, 2 to diarrhoea and enteritis, one to congenital malformation, 2 to congenital debility, and one to premature birth.

Twenty of the deaths recorded for the City during the week were those of children under 5 years of age; 15 being infants under one year, 3 of whom were under one month old, and 63 were those of persons aged 65 years and upwards, of whom 54 were aged 70 years or over.

Of the 165 deaths recorded, 87 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 23·1 per 1,000 of the population, and for Derry 19·6.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 15th March, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) See note at foot of fourth page. (b) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1940. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (c) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II.—Deaths registered during the week ended Saturday, 15th March, 1941, for the City of Dublin and the County Borough of Cork* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report.

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 15·6 and 17·5 ; City of Dublin 14·7 and 17·2 ; Borough of Dun Laoghaire 19·1 and 16·9 ; Cork 18·7 and 18·1 ; Limerick 11·4 and 13·3 ; and Waterford 14·9 and 16·8.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·5 per 1,000.

City of Dublin.—The number of births registered during the week was 236—120 boys and 116 girls. Exclusive of those numbering 37, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 199, representing a rate of 21·1 per 1,000.

The number of deaths registered was 151—79 males and 72 females. Of the total, 15 related to persons belonging to other localities,* and the deaths of three persons belonging to the City were registered in an adjoining district, so that the actual number of deaths for the City was 139, representing a rate of 14·7 per 1,000.

There were 5 deaths from the principal epidemic diseases comprising one from measles, 2 from whooping cough and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from whooping cough were 0, 0 and one ; and from diarrhoea and enteritis of children under 2 years of age were one, 2 and 2. There were no deaths from measles in the three previous weeks.

Tuberculous disease caused 11 deaths (8 of which were from pulmonary tuberculosis, and 3 from tuberculous meningitis), as against 21, 18 and 18 from all forms of tuberculosis in the three preceding weeks.

Seventeen deaths were caused by cancer, and 26 by diseases of the heart.

There were 12 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar pneumonia and 4 from pneumonia (unspecified). Bronchitis caused 14 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year of age, one was due to whooping cough, one to influenza, one to meningitis, 4 to pneumonia, 2 to diarrhoea and enteritis, one to congenital malformation, 2 to congenital debility, 3 to premature birth, and one to injury at birth.

Twenty-one of the deaths recorded for the City during the week were those of children under 5 years of age, 16 being infants under one year, 4 of whom were under one month old, and 61 were those of persons aged 65 years and upwards, of whom 43 were aged 70 years or over.

Of the 139 deaths recorded, 70 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs ; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 21·9 per 1,000 of the population, and for Derry 15·3.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 22nd March, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) See note at foot of fourth page. (b) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1940. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (c) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II.—Deaths registered during the week ended Saturday, 22nd March, 1941, for the City of Dublin and the County Borough of Cork* by Registrars Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report.

Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 15·7 and 16·8; City of Dublin 16·3 and 16·7; Borough of Dun Laoghaire 15·3 and 16·6; Cork 14·2 and 17·3; Limerick 10·2 and 11·8; and Waterford 22·4 and 16·8.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0·9 per 1,000. Among the 12 deaths from all causes for Waterford were one from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age.

City of Dublin.—The number of births registered during the week was 273—137 boys and 136 girls. Exclusive of those numbering 40, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 233, representing a rate of 24·7 per 1,000.

The number of deaths registered was 178—87 males and 91 females. Of the total, 24 related to persons belonging to other localities,* so that the actual number of deaths for the City was 154, representing a rate of 16·3 per 1,000.

There were 10 deaths from the principal epidemic diseases, comprising 4 from whooping cough, 2 from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from whooping cough were 0, one and 2; and from diarrhoea and enteritis of children under 2 years of age 2, 2 and 2. There were no deaths from diphtheria in the three previous weeks.

Tuberculous disease caused 23 deaths (17 of which were from pulmonary tuberculosis, 4 from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 18, 18 and 11 from all forms of tuberculosis in the three preceding weeks.

Fourteen deaths were caused by cancer, and 28 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused 11 deaths.

Three accidental deaths were registered, one of which was due to burns, and one to injuries caused by a motor vehicle. There was also one death by suicide.

Among the deaths of infants under one year of age, 2 were due to whooping cough, one to diphtheria, one to meningitis, 2 to convulsions, one to broncho-pneumonia, 4 to diarrhoea and enteritis, one to congenital malformation, 7 to congenital debility, 5 to premature birth, and one to injury at birth.

Thirty-three of the deaths recorded for the City during the week were those of children under 5 years of age, 26 being infants under one year, 9 of whom were under one month old, and 60 were those of persons aged 65 years and upwards, of whom 51 were aged 70 years or over.

Of the 154 deaths recorded, 78 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III. shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 19·0 per 1,000 of the population, and for Derry 19·6.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

(a) See note at foot of fourth page. (b) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1940. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (c) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II.—Deaths registered during the week ended Saturday, 29th March, 1941, for the City of Dublin and the County Borough of Cork* by Registrars Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report.

Baile Átha Cliath.

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 14.0 and 15.8; City of Dublin 13.7 and 15.6; Borough of Dun Laoghaire 12.7 and 15.6; Cork 15.5 and 17.0; Limerick 19.0 and 13.3; and Waterford 14.9 and 15.9.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0.7 per 1,000. Among the 15 deaths from all causes for Limerick were 3 from diarrhoea and enteritis of children under 2 years of age.

City of Dublin.—The number of births registered during the week was 238—145 boys and 143 girls. Exclusive of those numbering 55, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 233, representing a rate of 24.7 per 1,000.

The number of deaths registered was 148—85 males and 63 females. Of the total, 19 related to persons belonging to other localities,* so that the actual number of deaths for the City was 129, representing a rate of 13.7 per 1,000.

There were 7 deaths from the principal epidemic diseases, comprising one from diphtheria, and 6 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were 0, 0 and 2; and from diarrhoea and enteritis of children under 2 years of age 2, 2 and 4.

Tuberculous disease caused 16 deaths (15 of which were from pulmonary tuberculosis, and one from tuberculous peritonitis), as against 18, 11 and 23 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 26 by diseases of the heart.

There were 5 deaths from pneumonia, comprising 3 from broncho-pneumonia, one from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused 13 deaths.

One accidental death was registered.

Among the deaths of infants under one year of age, one was due to pneumonia, 6 to diarrhoea and enteritis, one to congenital malformation, one to congenital debility, and 4 to premature birth.

Twenty-two of the deaths recorded for the City during the week were those of children under 5 years of age, 20 being infants under one year, 7 of whom were under one month old, and 44 were those of persons aged 65 years and upwards, of whom 30 were aged 70 years or over.

Of the 129 deaths recorded, 65 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 16.9 per 1,000 of the population, and for Derry 16.4.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 5th April, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) See note at foot of fourth page. (b) According to Census of 1933, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (c) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II.—Deaths registered during the week ended Saturday, 5th April, 1941, for the City of Dublin and the County Borough of Cork* by Registrars' Districts.

| Pneumonia | 20 | 22 | 28 | 2 | 9 | . | 21 |

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report.

Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 14.5 and 15.0; City of Dublin 13.8 and 14.6; Borough of Dun Laoghaire 15.3 and 15.6; Cork 14.2 and 15.7; Limerick 7.6 and 12.1; and Waterford 37.3 and 22.4.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0.7 per 1,000. Among the 20 deaths from all causes for Waterford were 3 from diarrhoea and enteritis of children under 2 years of age, and included in the 3 deaths for Galway was one from typhoid fever.

City of Dublin.—The number of births registered during the week was 227—118 boys and 109 girls. Exclusive of those numbering 41, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 186, representing a rate of 19.7 per 1,000.

The number of deaths registered was 161—87 males and 74 females. Of the total, 32 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district,* so that the actual number of deaths for the City was 130, representing a rate of 13.8 per 1,000.

There were 4 deaths from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years of age were 2, 4 and 6

Tuberculous disease caused 15 deaths (9 of which were from pulmonary tuberculosis, 4 from tuberculous meningitis and 2 from other forms of tuberculous disease), as against 11, 23 and 16 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 23 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 2 from broncho-pneumonia, 2 from lobar pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 6 deaths.

One violent death was registered.

Among the deaths of infants under one year of age, one was due to pneumonia, 4 to diarrhoea and enteritis, 2 to congenital malformations, 2 to congenital debility, 11 to premature birth, and one to injury at birth.

Twenty-eight of the deaths recorded for the City during the week were those of children under 5 years of age, 25 being infants under one year, 18 of whom were under one month old, and 46 were those of persons aged 65 years and upwards, of whom 35 were aged 70 years or over.

Of the 130 deaths recorded, 79 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 16.7 per 1,000 of the population, and for Derry 12.0.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 12th April, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) See note at foot of fourth page. (b) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (c) The annual rates for the urban districts will be shown in the quarterly return. (d) Typhoid fever

TABLE II—Deaths registered during the week ended Saturday, 12th April, 1941, for the City of Dublin and the County Borough of Cork*
by Registrars' Districts.

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report.

PRINCIPAL TOWNS

Particulars of the Births and Deaths* recorded for the **Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 15.5 and 14.9; City of Dublin 16.5 and 15.1; Borough of Dun Laoghaire 16.5 and 15.0; Cork 13.6 and 14.4; Limerick 24.1 and 15.2; and Waterford 7.5 and 20.5.

The deaths from the principal epidemic diseases† recorded for the thirteen principal towns last week were represented by an annual rate of 0.5 per 1,000.

City of Dublin.—The number of births registered during the week was 241—107 boys and 134 girls. Exclusive of those numbering 43, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 198, representing a rate of 21.0 per 1,000.

The number of deaths registered was 174—84 males and 90 females. Of the total, 19 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district,* so that the actual number of deaths for the City was 156, representing a rate of 16.5 per 1,000.

There were 6 deaths from the principal epidemic diseases, comprising one from each of typhoid fever, measles, whooping cough and diphtheria; and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from whooping cough were 4, 0 and 0; from diphtheria 2, one and 0; and from diarrhoea and enteritis of children under 2 years of age 4, 6 and 4. There were no deaths from typhoid fever or measles during the same period.

Tuberculous disease caused 20 deaths (13 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis and 4 from other forms of tuberculous disease), as against 23, 16 and 15 from all forms of tuberculosis in the three preceding weeks.

Fourteen deaths were caused by cancer, and 38 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 3 from broncho-pneumonia, 4 from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused 7 deaths.

Three accidental deaths were registered, one of which was due to burns.

Among the deaths of infants under one year of age, one was due to meningococcal meningitis, one to whooping cough, one to meningitis, 2 to bronchitis, 3 to pneumonia, 2 to diarrhoea and enteritis, one to congenital malformation, 2 to congenital debility, and one to premature birth.

Twenty four of the deaths recorded for the City during the week were those of children under 5 years of age, 17 being infants under one year, 3 of whom were under one month old, and 68 were those of persons aged 65 years and upwards, of whom 48 were aged 70 years or over.

Of the 156 deaths recorded, 77 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 23.5 per 1,000 of the population, and for Derry 21.8.

* See note at foot of fourth page.

† Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 19th April, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) See note at foot of fourth page. (b) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (c) The annual rates for the urban districts will be shown in the quarterly return. (d) Typhoid fever.

TABLE II—Deaths registered during the week ended Saturday, 19th April, 1941, for the City of Dublin and the County Borough of Cork* by Registrars' Districts.

| Pneumonia | 28 | 21 | 23 | 14 | 5 | 1 | 31 |

NOTE.—For the purpose of the weekly returns, partial correction is made for births and deaths occurring in institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in institutions situated in the Registrar's Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the thirteen towns are excluded, and the deaths of residents in the Boroughs occurring in the Registrar's Districts above named are included as in the case of births. In addition, the deaths in institutions situated in the Registrar's Districts embracing the thirteen towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in institutions will be made in the detailed Annual Report.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 13.8 and 14.5; City of Dublin 13.4 and 14.4; Borough of Dun Laoghaire 10.2 and 13.7; Cork 16.1 and 14.9; Limerick 10.2 and 15.2; and Waterford 26.1 and 21.5.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.8 per 1,000. Among the 14 deaths from all causes for Waterford, was one from diphtheria,

City of Dublin.—The number of births registered during the week was 306—161 boys and 145 girls. Exclusive of those numbering 38, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 268, representing a rate of 28.4 per 1,000.

The number of deaths registered was 146—71 males and 75 females. Of the total, 20 related to persons belonging to other localities, so that the actual number of deaths for the City was 126, representing a rate of 13.4 per 1,000.

There were 10 deaths from the principal epidemic diseases, comprising one from whooping cough, 2 from diphtheria, and 7 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from whooping cough were 0, 0 and 2; from diphtheria one, 0 and one; and from diarrhoea and enteritis of children under 2 years of age 6, 4 and 2.

Tuberculous disease caused 13 deaths (10 of which were from pulmonary tuberculosis, one from tuberculous meningitis and 2 from other forms of tuberculous disease), as against 16, 15 and 20 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were caused by cancer, and 16 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 4 from broncho-pneumonia, 2 from lobar pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 4 deaths.

Four accidental deaths were registered, one of which was due to injuries caused by a motor vehicle; and one to scalds. There was also one death by suicide.

Among the deaths of infants under one year of age, one was due to whooping cough, 2 to pneumonia, 7 to diarrhoea and enteritis, one to congenital malformation, 3 to congenital debility, and 5 to premature birth.

Twenty-seven of the deaths recorded for the City during the week were those of children under 5 years of age, 19 being infants under one year, 5 of whom were under one month old, and 52 were those of persons aged 65 years and upwards, of whom 37 were aged 70 years or over.

Of the 126 deaths recorded, 83 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 52.1 per 1,000 of the population, and for Derry 13.1.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 26th April, 1941, for the Principal Towns of Fire, with similar particulars for BELFAST and DERRY.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II.—Deaths registered during the week ended Saturday, 26th April, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

No. 18. Vol. LXXVIII.]

WEEK ENDING SATURDAY, 3rd May, 1941.

PRICE 1½d. NET.

*Oifig an Ard-Chláradóra,
Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the Principal Towns are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 14.0 and 14.5; City of Dublin 12.7 and 14.1; Borough of Dun Laoghaire 10.2 and 13.1; Cork 22.6 and 16.6; Limerick 11.4 and 13.3; and Waterford 13.1 and 21.0.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.7 per 1,000. Among the 35 deaths from all causes for Cork was one from whooping cough.

City of Dublin.—The number of births registered during the week was 297—150 boys and 147 girls. Exclusive of those numbering 54, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 243, representing a rate of 25.8 per 1,000.

The number of deaths registered was 150—78 males and 72 females. Of the total, 30 related to persons belonging to other localities, so that the actual number of deaths for the City was 120, representing a rate of 12.7 per 1,000.

There were 7 deaths from the principal epidemic diseases, comprising one from whooping cough, 2 from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from whooping cough were 0, one and one; from diphtheria 0, one and 2; and from diarrhoea and enteritis of children under 2 years of age 4, 2 and 7.

Tuberculous disease caused 10 deaths (9 of which were from pulmonary tuberculosis and one from tuberculous meningitis), as against 15, 20 and 13 from all forms of tuberculosis in the three preceding weeks.

Five deaths were caused by cancer, and 21 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 5 from broncho-pneumonia and 3 from pneumonia (unspecified). Bronchitis caused 12 deaths.

Three accidental deaths were registered, one of which was due to drowning.

Among the deaths of infants under one year of age, one was due to whooping cough, 4 to pneumonia, 4 to diarrhoea and enteritis, 3 to congenital debility, and 10 to premature birth.

Thirty-six of the deaths recorded for the City during the week were those of children under 5 years of age, 28 being infants under one year, 10 of whom were under one month old, and 38 were those of persons aged 65 years and upwards, of whom 27 were aged 70 years or over.

Of the 120 deaths recorded, 72 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 18.5 per 1,000 of the population, and for Derry 8.7.

*Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 3rd May, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II—Deaths registered during the week ended Saturday, 3rd May, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

*Oifig an Ard-Chláradóra,
Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the Principal Towns are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 14.3 and 14.4; City of Dublin 14.1 and 14.2; Borough of Dun Laoghaire 16.5 and 13.4; Cork 18.1 and 17.6; Limerick 8.9 and 13.7; and Waterford 24.2 and 17.7.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.5 per 1,000. Among the 7 deaths from all causes for Limerick were 2 from diarrhoea and enteritis of children under 2 years of age.

City of Dublin.—The number of births registered during the week was 280—146 boys and 134 girls. Exclusive of those numbering 41, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 239, representing a rate of 25.3 per 1,000.

The number of deaths registered was 157—83 males and 74 females. Of the total, 24 related to persons belonging to other localities, so that the actual number of deaths for the City was 133, representing a rate of 14.1 per 1,000.

There were 6 deaths from the principal epidemic diseases, comprising one from typhoid fever, one from measles, one from diphtheria, and 3 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from typhoid fever were one, 0 and 0; from measles, one, 0 and 0; from diphtheria, one, 2 and 2; and from diarrhoea and enteritis of children under 2 years of age, 2, 7 and 4.

Tuberculous disease caused 16 deaths (11 of which were from pulmonary tuberculosis, 4 from tuberculous meningitis and one from disseminated tuberculosis); as against 20, 13 and 10 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were caused by cancer, and 20 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 4 from broncho-pneumonia, 2 from lobar pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 5 deaths.

Among the deaths of infants under one year of age, one was due to meningococcal meningitis, 5 to pneumonia, 3 to diarrhoea and enteritis, 3 to congenital debility, 7 to premature birth and one to injury at birth.

Twenty-one of the deaths recorded for the City during the week were those of children under 5 years of age, 21 being infants under one year, 12 of whom were under one month old, and 43 were those of persons aged 65 years and upwards, of whom 38 were aged 70 years or over.

Of the 133 deaths recorded, 70 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 22.5 per 1,000 of the population, and for Derry 12.0.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 10th May, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

| PRINCIPAL TOWNS | POPULATION (a) | Annual Rate (b) per 1,000 persons | | BIRTHS | DEATHS | | DEATHS | Under 1 year of age | 65 years and upwards | CAUSED BY | | | | | | | | | | | | | | | | | Inquest Cases | In public institutions | Number uncertified |

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return. (c) Typhoid fever.

TABLE II—Deaths registered during the week ended Saturday, 10th May, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

No. 20. Vol. LXXVIII.]

WEEK ENDING SATURDAY, 17th May, 1941.

PRICE 1½d. NET.

*Oifig an Ard-Chláradóra,
Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the Principal Towns are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 15.5 and 14.4; City of Dublin 15.4 and 13.9; Borough of Dun Laoghaire 21.6 and 14.6; Cork 14.8 and 17.9; Limerick 10.2 and 10.2; and Waterford 14.9 and 19.6.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.7 per 1,000. Among the 8 deaths from all causes for Waterford was one from whooping cough.

City of Dublin.—The number of births registered during the week was 270—146 boys and 124 girls. Exclusive of those numbering 53, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 217, representing a rate of 23.0 per 1,000.

The number of deaths registered was 161—86 males and 75 females. Of the total, 17 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district, so that the actual number of deaths for the City was 145, representing a rate of 15.4 per 1,000.

There were 9 deaths from the principal epidemic diseases, comprising one from whooping cough, and 8 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from whooping cough were one, one and 0; and from diarrhoea and enteritis of children under 2 years of age, 7, 4 and 3.

Tuberculous disease caused 14 deaths (12 of which were from pulmonary tuberculosis, one from tuberculous meningitis and one from intestinal tuberculosis), as against 13, 10 and 16 from all forms of tuberculosis in the three preceding weeks.

Seven deaths were caused by cancer, and 29 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 8 from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 7 deaths.

Among the deaths of infants under one year of age, six were due to pneumonia, 8 to diarrhoea and enteritis, one to congenital malformation, 2 to congenital debility, 9 to premature birth and one to injury at birth.

Thirty-three of the deaths recorded for the City during the week were those of children under 5 years of age, 29 being infants under one year, 15 of whom were under one month old, and 52 were those of persons aged 65 years and upwards, of whom 39 were aged 70 years or over.

Of the 145 deaths recorded, 86 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 19.4 per 1,000 of the population, and for Derry 20.7.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 17th May, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 12.3 and 14.0; City of Dublin 12.4 and 13.7; Borough of Dun Laoghaire 20.3 and 17.2; Cork 11.6 and 16.8; Limerick 10.2 and 10.2; and Waterford 13.1 and 16.3.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.9 per 1,000. Among the 16 deaths from all causes for Dun Laoghaire were 2 from diarrhoea and enteritis of children under 2 years of age: one of the 18 deaths for Cork was from diphtheria, and one of the 7 for Waterford was also from this disease. Included in the 5 for Drogheda was one from whooping cough.

City of Dublin.—The number of births registered during the week was 354—164 boys and 190 girls. Exclusive of those numbering 61, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 293, representing a rate of 31.1 per 1,000.

The number of deaths registered was 135—62 males and 73 females. Of the total, 20 related to persons belonging to other localities, and the deaths of 2 persons belonging to the City were registered in an adjoining district, so that the actual number of deaths for the City was 117, representing a rate of 12.4 per 1,000.

There were 8 deaths from the principal epidemic diseases, comprising 2 from diphtheria, and 6 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were 2, one and 0; and from diarrhoea and enteritis of children under 2 years of age, 4, 3, and 8.

Tuberculous disease caused 13 deaths (9 of which were from pulmonary tuberculosis, one from tuberculous meningitis and 3 from other forms of tuberculous disease), as against 10, 16 and 14 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 29 by diseases of the heart.

There were 5 deaths from pneumonia, comprising 4 from broncho-pneumonia, and one from pneumonia (unspecified). Bronchitis caused 6 deaths.

One accidental death was registered.

Among the deaths of infants under one year of age, one was due to diphtheria, one to meningitis, 2 to convulsions, one to pneumonia, 6 to diarrhoea and enteritis, 3 to congenital malformations, 2 to congenital debility, and 3 to premature birth.

Twenty-seven of the deaths recorded for the City during the week were those of children under 5 years of age, 20 being infants under one year, 6 of whom were under one month old, and 51 were those of persons aged 65 years and upwards, of whom 41 were aged 70 years or over.

Of the 117 deaths recorded, 70 occurred in hospitals or other public institutions.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 15.2 per 1,000 of the population, and for Derry 17.4.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 24th May, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 12.9 and 13.8; City of Dublin 12.6 and 13.6; Borough of Dun Laoghaire 11.4 and 17.5; Cork 9.7 and 13.6; Limerick 22.9 and 13.1; and Waterford 14.9 and 16.8.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.5 per 1,000.

City of Dublin.—The number of births registered during the week was 326—174 boys and 152 girls. Exclusive of those numbering 44, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 282, representing a rate of 29.9 per 1,000.

The number of deaths registered was 147—96 males and 51 females. Of the total, 28 related to persons belonging to other localities, so that the actual number of deaths for the City was 119, representing a rate of 12.6 per 1,000.

There were 6 deaths from the principal epidemic diseases, comprising 2 from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were one, 0 and 2; and from diarrhoea and enteritis of children under 2 years of age, 3, 8 and 6.

Tuberculous disease caused 9 deaths (7 of which were from pulmonary tuberculosis, one from tuberculous meningitis and one from disseminated tuberculosis), as against 16, 14 and 13 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 25 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 4 from broncho-pneumonia, 2 from lobar pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 2 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year of age, one was due to meningitis, one to bronchitis, 3 to pneumonia, 4 to diarrhoea and enteritis, one to congenital malformation, 6 to congenital debility, 6 to premature birth and 2 to injury at birth.

Thirty-three of the deaths recorded for the City during the week were those of children under 5 years of age, 29 being infants under one year, 14 of whom were under one month old, and 31 were those of persons aged 65 years and upwards, of whom 23 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

Northern Ireland.—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 9.0 per 1,000 of the population, and for Derry 9.8.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 31st May, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 14.2 and 13.7; City of Dublin 15.4 and 14.0; Borough of Dun Laoghaire 14.0 and 16.8; Cork 16.1 and 13.1; Limerick 7.6 and 12.7; and Waterford 13.1 and 14.0.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.5 per 1,000. Among the 11 deaths from all causes for Dun Laoghaire were one from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age.

City of Dublin.—The number of births registered during the week was 214—106 boys and 108 girls. Exclusive of those numbering 40, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 174, representing a rate of 18.4 per 1,000.

The number of deaths registered was 166—81 males and 85 females. Of the total 21 related to persons belonging to other localities, so that the actual number of deaths for the City was 145, representing a rate of 15.4 per 1,000.

There were 4 deaths from the principal epidemic diseases, comprising one from measles and 3 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years of age were 8, 6 and 4. There were no deaths from measles registered during the same period.

Tuberculous disease caused 18 deaths (12 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis and 3 from other forms of tuberculous disease), as against 14, 13 and 9 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were caused by cancer, and 23 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 2 from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 8 deaths.

Sixteen violent deaths were registered, 12 of which were due to aerial bombing.

Among the deaths of infants under one year of age, one was due to tuberculosis, one to measles, one to meningitis, one to pneumonia, 3 to diarrhoea and enteritis, one to congenital malformation, 5 to congenital debility, 3 to premature birth and 2 to injury at birth.

Thirty of the deaths recorded for the City during the week were those of children under 5 years of age, 22 being infants under one year, 12 of whom were under one month old, and 50 were those of persons aged 65 years and upwards, of whom 42 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Deaths registered during the week ended Saturday, 7th June, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the Principal Towns are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 13.5 and 13.2; City of Dublin 15.2 and 13.9; Borough of Dun Laoghaire 20.3 and 16.5; Cork 10.3 and 11.9; Limerick 14.0 and 13.7; and Waterford 9.3 and 12.6.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.5 per 1,000. The only death for Drogheda was from whooping cough.

City of Dublin.—The number of births registered during the week was 298—149 boys and 149 girls. Exclusive of those numbering 52, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 246, representing a rate of 26.1 per 1,000.

The number of deaths registered was 158—78 males and 80 females. Of the total 15 related to persons belonging to other localities, so that the actual number of deaths for the City was 143, representing a rate of 15.2 per 1,000.

There were 7 deaths from the principal epidemic diseases, comprising one from measles, one from whooping cough, one from diphtheria and 4 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 0, 0 and one, from diphtheria 2, 2 and 0, and from diarrhoea and enteritis of children under 2 years of age 6, 4 and 3. There were no deaths from whooping cough registered during the same period.

Tuberculous disease caused 20 deaths (18 of which were from pulmonary tuberculosis, and 2 from other forms of tuberculous disease), as against 13, 9 and 18 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 31 by diseases of the heart.

There were 4 deaths from pneumonia, comprising 3 from broncho-pneumonia, and one from pneumonia (unspecified). Bronchitis caused 5 deaths.

Fifteen violent deaths were registered, 11 of which were due to aerial bombing.

Among the deaths of infants under one year of age, one was due to whooping cough, 2 to tuberculosis, one to meningitis, one to bronchitis, one to pneumonia, 4 to diarrhoea and enteritis, 2 to congenital debility, 7 to premature birth and one to injury at birth.

Thirty-two of the deaths recorded for the City during the week were those of children under 5 years of age, 24 being infants under one year, 12 of whom were under one month old, and 40 were those of persons aged 65 years and upwards, of whom 27 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 14th June, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II—Deaths registered during the week ended Saturday, 14th June, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

[illegible]

TABLE III.—Cases of infectious diseases notified in the undermentioned urban areas during the week ended Saturday, 14th June, 1941, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 13.1 and 13.4; City of Dublin 13.7 and 14.2; Borough of Dun Laoghaire 12.7 and 14.6; Cork 12.3 and 12.1; Limerick 12.7 and 14.3; and Waterford 14.9 and 13.1.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.3 per 1,000. Among the 8 deaths from all causes for Waterford was one from diphtheria and included in the 4 for Galway were 3 from measles.

City of Dublin.—The number of births registered during the week was 287—159 boys and 128 girls. Exclusive of those numbering 55, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 232, representing a rate of 24.6 per 1,000.

The number of deaths registered was 148—75 males and 73 females. Of the total 19 related to persons belonging to other localities, so that the actual number of deaths for the City was 129, representing a rate of 13.7 per 1,000.

There were 14 deaths from the principal epidemic diseases, comprising 5 from measles, one from diphtheria and 8 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 0, one and one, from diphtheria 2, 0 and one, and from diarrhoea and enteritis of children under 2 years of age 4, 3 and 4.

Tuberculous disease caused 13 deaths (10 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 9, 18 and 20 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 22 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 4 from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 7 deaths.

Nine violent deaths were registered, 3 of which were due to aerial bombing.

Among the deaths of infants under one year of age, 2 were due to measles, one to meningitis, 5 to pneumonia, 8 to diarrhoea and enteritis, one to congenital debility and 5 to premature birth.

Thirty of the deaths recorded for the City during the week were those of children under 5 years of age, 25 being infants under one year, 9 of whom were under one month old, and 50 were those of persons aged 65 years and upwards, of whom 22 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 21st June, 1941, for the Principal Towns of Fire, with similar particulars for BELFAST and DERRY.

| PRINCIPAL TOWNS | POPULATION (a) | Annual Rate (b) per 1,000 persons | | BIRTHS | DEATHS | | BIRTHS | DEATHS | CAUSED BY | | | | | | | | | | | | | | | | Inquest Cases | In public institutions | Number uncertified | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II.—Deaths registered during the week ended Saturday, 21st June, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 12.0 and 13.2; City of Dublin 11.7 and 14.0; Borough of Dun Laoghaire 6.4 and 13.4; Cork 12.3 and 12.8; Limerick 10.2 and 11.1; and Waterford 18.6 and 14.0.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.7 per 1,000. Among the 19 deaths from all causes for Cork were 2 from diarrhoea and enteritis of children under 2 years of age and one of the 4 deaths for Galway was from measles.

City of Dublin.—The number of births registered during the week was 311—160 boys and 151 girls. Exclusive of those numbering 58, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 253, representing a rate of 26.8 per 1,000.

The number of deaths registered was 125—58 males and 67 females. Of the total 15 related to persons belonging to other localities, so that the actual number of deaths for the City was 110, representing a rate of 11.7 per 1,000.

There were 7 deaths from the principal epidemic diseases, comprising one from whooping cough and 6 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from whooping cough were 0, one and 0, and from diarrhoea and enteritis of children under 2 years of age 3, 4 and 8.

Tuberculous disease caused 12 deaths (10 of which were from pulmonary tuberculosis, and 2 from other forms of tuberculous disease), as against 18, 20 and 13 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 23 by diseases of the heart.

There were 3 deaths from pneumonia, comprising one from broncho-pneumonia, one from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused 5 deaths.

Among the deaths of infants under one year of age, one was due to whooping cough, one to meningitis, 2 to pneumonia, 6 to diarrhoea and enteritis, 2 to congenital debility and 9 to premature birth.

Twenty-four of the deaths recorded for the City during the week were those of children under 5 years of age, 22 being infants under one year, 13 of whom were under one month old, and 32 were those of persons aged 65 years and upwards, of whom 26 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 28th June, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the Principal Towns are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 11.2 and 12.5; City of Dublin 12.0 and 13.2; Borough of Dun Laoghaire 5.1 and 11.1; Cork 11.0 and 11.5; Limerick 8.9 and 11.5; and Waterford 12.1 and 14.0.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.0 per 1,000. Among the 3 deaths from all causes for Bray was one from typhoid fever.

City of Dublin.—The number of births registered during the week was 321—162 boys and 159 girls. Exclusive of those numbering 46, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 275, representing a rate of 29.2 per 1,000.

The number of deaths registered was 134—65 males and 69 females. Of the total 21 related to persons belonging to other localities, so that the actual number of deaths for the City was 113, representing a rate of 12.0 per 1,000.

There were 12 deaths from the principal epidemic diseases, comprising 2 from measles, one from whooping cough and 9 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were one, 5 and 0, from whooping cough one, 0 and one, and from diarrhoea and enteritis of children under 2 years of age 4, 8 and 6.

Tuberculous disease caused 15 deaths (12 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from disseminated tuberculosis), as against 20, 13 and 12 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were caused by cancer, and 19 by diseases of the heart.

There were 3 deaths from pneumonia (unspecified). Bronchitis caused 4 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year of age, one was due to measles, one to pneumonia, 8 to diarrhoea and enteritis, 2 to congenital debility, 5 to premature birth, and 3 to injury at birth.

Twenty-eight of the deaths recorded for the City during the week were those of children under 5 years of age, 22 being infants under one year, 10 of whom were under one month old, and 36 were those of persons aged 65 years and upwards, of whom 28 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 5th July, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

*Oifig an Ard-Chláradóra,
Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 12.3 and 12.2; City of Dublin 12.5 and 12.5; Borough of Dun Laoghaire 10.2 and 8.6; Cork 12.9 and 12.1; Limerick 7.6 and 9.9; and Waterford 14.9 and 15.4.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.3 per 1,000. Among the 8 deaths from all causes for Waterford were 2 from diarrhoea and enteritis of children under 2 years of age; and the 7 deaths for Galway included 2 from measles and one from diarrhoea and enteritis of a child under 2 years of age.

City of Dublin.—The number of births registered during the week was 271—132 boys and 139 girls. Exclusive of those numbering 50, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 221, representing a rate of 23.4 per 1,000.

The number of deaths registered was 133—61 males and 72 females. Of the total 15 related to persons belonging to other localities, so that the actual number of deaths for the City was 118, representing a rate of 12.5 per 1,000.

There were 13 deaths from the principal epidemic diseases, comprising one from measles, one from whooping cough, 2 from diphtheria and 9 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 5, 0 and 2, from whooping cough 0, one and one, from diphtheria one, 0 and 0, and from diarrhoea and enteritis of children under 2 years of age 8, 6 and 9.

Tuberculous disease caused 13 deaths (9 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from disseminated tuberculosis), as against 13, 12 and 15 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 17 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 4 from broncho-pneumonia and 2 from lobar pneumonia. Bronchitis caused 5 deaths.

Three accidental deaths were registered, one of which was due to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, one was due to whooping cough, one to tuberculosis, one to meningitis, 3 to pneumonia, 8 to diarrhoea and enteritis, 5 to premature birth, and one to injury at birth.

Thirty-two of the deaths recorded for the City during the week were those of children under 5 years of age; 25 being infants under one year, 11 of whom were under one month old, and 43 were those of persons aged 65 years and upwards, of whom 35 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 12th July, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II—Deaths registered during the week ended Saturday, 12th July, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

WEEK ENDING SATURDAY, 19th July, 1941.

PRICE 1½d. NET.

*Oifig an Ard-Chláradóra,**Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 11.2 and 11.7; City of Dublin 10.9 and 11.8; Borough of Dun Laoghaire 20.3 and 10.5; Cork 9.7 and 11.5; Limerick 8.9 and 8.9; and Waterford 7.5 and 13.5.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.3 per 1,000.

City of Dublin.—The number of births registered during the week was 279—143 boys and 136 girls. Exclusive of those numbering 58, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 221, representing a rate of 23.4 per 1,000.

The number of deaths registered was 123—70 males and 53 females. Of the total 20 related to persons belonging to other localities, so that the actual number of deaths for the City was 103, representing a rate of 10.9 per 1,000.

There were 19 deaths from the principal epidemic diseases, comprising 5 from measles, 2 from whooping cough, and 12 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 0, 2 and one, from whooping cough one, one and one, and from diarrhoea and enteritis of children under 2 years of age 6, 9, and 9.

Tuberculous disease caused 18 deaths (15 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from renal tuberculosis), as against 12, 15 and 13 from all forms of tuberculosis in the three preceding weeks.

Six deaths were caused by cancer, and 21 by diseases of the heart.

There were 3 deaths from pneumonia, comprising 2 from broncho-pneumonia and one from pneumonia, (unspecified). Bronchitis caused 2 deaths.

One accidental death, due to burns, was registered. There was also one death by suicide.

Among the deaths of infants under one year of age, 2 were due to whooping cough, one to measles, one to convulsions, one to pneumonia, and 12 to diarrhoea and enteritis.

Twenty-three of the deaths recorded for the City during the week were those of children under 5 years of age, 18 being infants under one year, 4 of whom were under one month old, and 34 were those of persons aged 65 years and upwards, of whom 20 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 19th July, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

TABLE III.—Cases of infectious diseases notified in the undermentioned urban areas during the week ended Saturday, 19th July, 1941, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 11.0 and 11.4; City of Dublin 10.6 and 11.5; Borough of Dun Laoghaire 12.7 and 12.1; Cork 8.4 and 10.5; Limerick 14.0 and 9.9; and Waterford 13.1 and 12.2.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.8 per 1,000. Among the 4 deaths from all causes for Galway was one from measles and one of the 2 deaths for Bray was from typhoid fever.

City of Dublin.—The number of births registered during the week was 298—159 boys and 139 girls. Exclusive of those numbering 50, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 248, representing a rate of 26.3 per 1,000.

The number of deaths registered was 117—56 males and 61 females. Of the total 17 related to persons belonging to other localities, so that the actual number of deaths for the City was 100, representing a rate of 10.6 per 1,000.

There were 9 deaths from the principal epidemic diseases, comprising one from diphtheria and 8 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were 0, 2 and 0, and from diarrhoea and enteritis of children under 2 years of age 9, 9 and 12.

Tuberculous disease caused 11 deaths (9 of which were from pulmonary tuberculosis, and 2 from other forms of tuberculous disease), as against 15, 13 and 18 from all forms of tuberculosis in the three preceding weeks.

Fourteen deaths were caused by cancer, and 19 by diseases of the heart.

There were 4 deaths from pneumonia, comprising 2 from broncho-pneumonia, one from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused 3 deaths.

One accidental death, due to burns, was registered. There was also one death by suicide.

Among the deaths of infants under one year of age, one was due to diphtheria, one to pneumonia, 7 to diarrhoea and enteritis, 2 to congenital malformations, one to congenital debility and one to injury at birth.

Eighteen of the deaths recorded for the City during the week were those of children under 5 years of age, 15 being infants under one year, 8 of whom were under one month old, and 38 were those of persons aged 65 years and upwards, of whom 23 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 26th July, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

| PRINCIPAL TOWNS | POPULATION (a) | Annual Rate (b) per 1,000 persons | | | BIRTHS | DEATHS | DEATHS CAUSED BY | | | | | | | | | | | | | | | Inquest Cases | In public institutions | Number uncertified | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return. (c) Typhoid fever

TABLE II.—Deaths registered during the week ended Saturday, 26th July, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

No. 31. Vol. LXXVIII.]

WEEK ENDING SATURDAY, 2nd August, 1941.

PRICE 1½d. NET.

*Oifig an Ard-Chláradóra,
Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 12.6 and 11.8; City of Dublin 13.4 and 11.9; Borough of Dun Laoghaire 16.5 and 14.9; Cork 10.3 and 10.3; Limerick 7.6 and 9.5; and Waterford 9.3 and 11.2.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.5 per 1,000. Among the 13 deaths from all causes for Dún Laoghaire was one from typhoid fever, the 16 for Cork included one from diphtheria, and one of the 2 deaths for Galway was from measles.

City of Dublin.—The number of births registered during the week was 273—154 boys and 119 girls. Exclusive of those numbering 54, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 219, representing a rate of 23.2 per 1,000.

The number of deaths registered was 144—77 males and 67 females. Of the total 18 related to persons belonging to other localities, so that the actual number of deaths for the City was 126, representing a rate of 13.4 per 1,000.

There were 19 deaths from the principal epidemic diseases, comprising 2 from whooping cough, 2 from diphtheria and 15 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from whooping cough were one, 2 and 0; from diphtheria 2, 0 and one, and from diarrhoea and enteritis of children under 2 years of age 9, 12 and 8.

Tuberculous disease caused 13 deaths (8 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis and 3 from other forms of tuberculous disease), as against 13, 18 and 11 from all forms of tuberculosis in the three preceding weeks.

Seven deaths were caused by cancer, and 13 by diseases of the heart.

There were 5 deaths from pneumonia, comprising 2 from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 6 deaths.

Four accidental deaths were registered, 3 of which were due to drowning. There was also one death by homicide.

Among the deaths of infants under one year of age, 2 were due to whooping cough, one to tuberculous disease, one to bronchitis, 2 to pneumonia, 15 to diarrhoea and enteritis, one to congenital malformation, 3 to congenital debility, 10 to premature birth and 2 to injury at birth.

Fifty-six of the deaths recorded for the City during the week were those of children under 5 years of age, 47 being infants under one year, 26 of whom were under one month old, and 33 were those of persons aged 65 years and upwards, of whom 23 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 2nd August, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 12.1 and 11.7; City of Dublin 11.2 and 11.5; Borough of Dun Laoghaire 16.5 and 16.5; Cork 11.6 and 10.0; Limerick 14.0 and 11.1; and Waterford 24.2 and 13.5.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.7 per 1,000. Among the 13 deaths from all causes for Dún Laoghaire were 3 from diarrhoea and enteritis (of children under 2 years of age), the 18 for Cork included one from diphtheria, and one of the 6 deaths for Sligo was from diphtheria.

City of Dublin.—The number of births registered during the week was 242—127 boys and 115 girls. Exclusive of those numbering 54, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 188, representing a rate of 19.9 per 1,000.

The number of deaths registered was 124—70 males and 54 females. Of the total 18 related to persons belonging to other localities, so that the actual number of deaths for the City was 106, representing a rate of 11.2 per 1,000.

There were 21 deaths from the principal epidemic diseases, comprising one from measles and 20 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 5, 0 and 0; and from diarrhoea and enteritis of children under 2 years of age 12, 8 and 15.

Tuberculous disease caused 6 deaths (all of which were from pulmonary tuberculosis), as against 18, 11 and 13 from all forms of tuberculosis in the three preceding weeks.

Twelve deaths were caused by cancer, and 15 by diseases of the heart.

There were 2 deaths from lobar pneumonia. Bronchitis caused one death.

Two accidental deaths were registered, one of which was due to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, one was due to measles, 20 to diarrhoea and enteritis, 4 to congenital malformations, 3 to premature birth and 2 to injury at birth.

Thirty-three of the deaths recorded for the City during the week were those of children under 5 years of age, 30 being infants under one year, 12 of whom were under one month old, and 27 were those of persons aged 65 years and upwards, of whom 18 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 11.1 and 11.7; City of Dublin 12.7 and 12.0; Borough of Dun Laoghaire 8.9 and 13.7; Cork 9.7 and 10.0; Limerick 8.9 and 11.1; and Waterford 13.1 and 14.9.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.7 per 1,000. The one death for Bray was from whooping-cough.

City of Dublin.—The number of births registered during the week was 255—141 boys and 114 girls. Exclusive of those numbering 39, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 216, representing a rate of 22.9 per 1,000.

The number of deaths registered was 137—67 males and 70 females. Of the total 17 related to persons belonging to other localities, so that the actual number of deaths for the City was 120, representing a rate of 12.7 per 1,000.

There were 24 deaths from the principal epidemic diseases, comprising one from measles, one from whooping cough, 2 from diphtheria and 20 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 0, 0 and one; from whooping cough 0, 2 and 0; from diphtheria one, one, and 0; and from diarrhoea and enteritis of children under 2 years of age 8, 15 and 20.

Tuberculous disease caused 16 deaths (15 of which were from pulmonary tuberculosis and one from tuberculous meningitis), as against 11, 13 and 6 from all forms of tuberculosis in the three preceding weeks.

Seven deaths were caused by cancer, and 23 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 5 from broncho-pneumonia and 2 from pneumonia (unspecified). Bronchitis caused one death.

Two accidental deaths were registered, one of which was due to burns.

Among the deaths of infants under one year of age, one was due to diphtheria, one to pneumonia, 20 to diarrhoea and enteritis, 4 to congenital malformations, 2 to congenital debility, 3 to premature birth and one to injury at birth.

Forty-four of the deaths recorded for the City during the week were those of children under 5 years of age, 37 being infants under one year, 14 of whom were under one month old, and 32 were those of persons aged 65 years and upwards, of whom 24 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 16th August, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population of Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

WEEK ENDING SATURDAY, 23rd August, 1941.

PRICE 1½d. NET.

*Oifig an Ard-Chláradóra,
Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 9.8 and 11.4; City of Dublin 10.0 and 11.8; Borough of Dun Laoghaire 12.7 and 13.7; Cork 5.8 and 9.4; Limerick 10.2 and 10.2; and Waterford 5.6 and 13.1.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.7 per 1,000. Among the 3 deaths from all causes for Tralee was one from whooping-cough; and one of the 3 for Bray was from diphtheria.

City of Dublin.—The number of births registered during the week was 251—120 boys and 131 girls. Exclusive of those numbering 46, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 205, representing a rate of 21.7 per 1,000.

The number of deaths registered was 114—52 males and 62 females. Of the total 20 related to persons belonging to other localities, so that the actual number of deaths for the City was 94, representing a rate of 10.0 per 1,000.

There were 20 deaths from the principal epidemic diseases, comprising one from measles, one from whooping cough and 18 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 0, one and one; from whooping cough 2, 0 and one; and from diarrhoea and enteritis of children under 2 years of age 15, 20 and 20.

Tuberculous disease caused 16 deaths (10 of which were from pulmonary tuberculosis, 4 from tuberculous meningitis and 2 from other forms of tuberculous disease), as against 13, 6 and 16 from all forms of tuberculosis in the three preceding weeks.

Four deaths were caused by cancer, and 15 by diseases of the heart.

There were 5 deaths from broncho-pneumonia. Bronchitis caused 3 deaths.

Two deaths from violence were registered, one of which was due to suicide.

Among the deaths of infants under one year of age, one was due to measles, 2 to pneumonia, 15 to diarrhoea and enteritis, one to congenital malformation, 3 to congenital debility and one to premature birth.

Thirty-four of the deaths recorded for the City during the week were those of children under 5 years of age, 23 being infants under one year, 3 of whom were under one month old, and 23 were those of persons aged 65 years and upwards, of whom 13 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II—Deaths registered during the week ended Saturday, 23rd August, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

No. 35. Vol. LXXVIII.]

WEEK ENDING SATURDAY, 30th August, 1941.

PRICE 1½d. NET.

Oifig an Ard-Chláradóra,

Baile Átha Cliath.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 10.8 and 11.0; City of Dublin 10.8 and 11.2; Borough of Dun Laoghaire 14.0 and 13.0; Cork 11.6 and 9.7; Limerick 6.3 and 9.9; and Waterford 11.2 and 13.5.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.4 per 1,000.

City of Dublin.—The number of births registered during the week was 232—112 boys and 120 girls. Exclusive of those numbering 37, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 195, representing a rate of 20.7 per 1,000.

The number of deaths registered was 121—58 males and 63 females. Of the total 19 related to persons belonging to other localities, so that the actual number of deaths for the City was 102, representing a rate of 10.8 per 1,000.

There were 19 deaths from the principal epidemic diseases, comprising 2 from whooping cough and 17 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from whooping cough were 0, one and one; and from diarrhoea and enteritis of children under 2 years of age, 20, 20 and 18.

Tuberculous disease caused 9 deaths (6 of which were from pulmonary tuberculosis, one from tuberculous peritonitis, and 2 from other forms of tuberculous disease), as against 5, 16 and 16 from all-forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 24 by diseases of the heart.

There were 4 deaths from pneumonia, comprising 2 from broncho-pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 3 deaths.

Four deaths from violence were registered, one of which was due to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, 2 were due to whooping cough, one to pneumonia, 16 to diarrhoea and enteritis, one to congenital malformation, 5 to congenital debility, and 5 to premature birth.

Thirty-four of the deaths recorded for the City during the week were those of children under 5 years of age, 32 being infants under one year, 11 of whom were under one month old, and 28 were those of persons aged 65 years and upwards, of whom 16 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 30th August, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 13.6 and 11.3; City of Dublin 13.3 and 11.7; Borough of Dun Laoghaire 15.3 and 12.7; Cork 9.0 and 9.0; Limerick 24.1 and 12.4; and Waterford 18.6 and 12.1.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 2.1 per 1,000. Among the 19 deaths from all causes for Limerick was one from whooping cough.

City of Dublin.—The number of births registered during the week was 288—163 boys and 125 girls. Exclusive of those numbering 41, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 247, representing a rate of 26.2 per 1,000.

The number of deaths registered was 140—71 males and 69 females. Of the total, 15 related to persons belonging to other localities, so that the actual number of deaths for the City was 125, representing a rate of 13.3 per 1,000.

There were 28 deaths from the principal epidemic diseases, comprising 2 from measles, 2 from whooping cough and 24 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were one, one and 0; from whooping cough one, one and 2; and from diarrhoea and enteritis of children under 2 years of age, 20, 18 and 17.

Tuberculous disease caused 13 deaths (9 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis and one from tuberculous peritonitis) as against 16, 16 and 9 from all forms of tuberculosis in the three preceding weeks.

Twelve deaths were caused by cancer, and 21 by diseases of the heart.

There were 5 deaths from pneumonia, comprising 3 from broncho-pneumonia and 2 from lobar pneumonia. Bronchitis caused 2 deaths.

One accidental death, due to drowning, was registered.

Among the deaths of infants under one year of age, 2 were due to whooping cough, one to measles, one to tuberculosis, 2 to pneumonia, 24 to diarrhoea and enteritis, one to congenital malformation, 2 to congenital debility, and 5 to premature birth.

Forty-seven of the deaths recorded for the City during the week were those of children under 5 years of age, 39 being infants under one year, 9 of whom were under one month old, and 34 were those of persons aged 65 years and upwards, of whom 25 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

*Oifig an Ard-Chláradóra,
Baile Átha Cliath.***PRINCIPAL TOWNS**

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 11.5 and 11.4; City of Dublin 12.8 and 11.7; Borough of Dun Laoghaire 12.7 and 13.7; Cork 11.0 and 9.4; Limerick 8.9 and 12.4; and Waterford 3.7 and 9.8.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.4 per 1,000. Among the 10 deaths from all causes for Dun Laoghaire was one from whooping cough, and 2 from diarrhoea and enteritis of children under 2 years of age.

City of Dublin.—The number of births registered during the week was 399—192 boys and 207 girls. Exclusive of those numbering 67, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 332, representing a rate of 35.2 per 1,000.

The number of deaths registered was 137—69 males and 68 females. Of the total, 17 related to persons belonging to other localities, and the death of one person belonging to the city was registered in an adjoining district,* so that the actual number of deaths for the City was 121, representing a rate of 12.8 per 1,000.

There were 15 deaths from the principal epidemic diseases, comprising one from measles, 2 from whooping cough, one from diphtheria and 11 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were one, 0 and 2; from whooping cough one, 2 and 2; and from diarrhoea and enteritis of children under 2 years of age, 18, 17 and 24. There were no deaths from diphtheria in the three preceding weeks.

Tuberculous disease caused 12 deaths (9 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis and one from tuberculous peritonitis) as against 16, 9 and 13 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 21 by diseases of the heart.

There were 5 deaths from pneumonia, comprising 3 from broncho-pneumonia, one from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused 4 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year of age, one was due to whooping cough, one to convulsions, 2 to pneumonia, 11 to diarrhoea and enteritis, 3 to congenital malformations, 5 to congenital debility, 10 to premature birth, and one to injury at birth.

Forty-six of the deaths recorded for the City during the week were those of children under 5 years of age, 39 being infants under one year, 18 of whom were under one month old, and 28 were those of persons aged 65 years and upwards, of whom 19 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 13th September, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the Principal Towns are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 10.9 and 11.7; City of Dublin 10.3 and 11.8; Borough of Dun Laoghaire 14.0 and 14.0; Cork 10.3 and 10.5; Limerick 10.2 and 12.4; and Waterford 11.2 and 11.2.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.4 per 1,000. Among the 8 deaths from all causes for Limerick was one from diphtheria.

City of Dublin.—The number of births registered during the week was 256—139 boys and 117 girls. Exclusive of those numbering 44, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 212, representing a rate of 22.5 per 1,000.

The number of deaths registered was 109—63 males and 46 females. Of the total, 12 related to persons belonging to other localities, so that the actual number of deaths for the City was 97, representing a rate of 10.3 per 1,000.

There were 18 deaths from the principal epidemic diseases, comprising 2 from whooping cough, one from diphtheria and 15 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from whooping cough were 2, 2 and 2; from diphtheria, 0, 0 and one; and from diarrhoea and enteritis of children under 2 years of age, 17, 24 and 11.

Tuberculous disease caused 7 deaths (all of which were from pulmonary tuberculosis), as against 9, 13 and 12 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 24 by diseases of the heart.

There were 3 deaths from pneumonia, comprising 2 from broncho-pneumonia and one from pneumonia (unspecified). Bronchitis caused 3 deaths.

One accidental death was registered.

Among the deaths of infants under one year of age, 2 were due to whooping cough, one to pneumonia, 14 to diarrhoea and enteritis, one to congenital debility and one to premature birth.

Twenty-four of the deaths recorded for the City during the week were those of children under 5 years of age, 20 being infants under one year, 4 of whom were under one month old, and 31 were those of persons aged 65 years and upwards, of whom 22 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 20th September, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 11.0 and 11.8; City of Dublin 11.6 and 12.0; Borough of Dun Laoghaire 10.2 and 13.1; Cork 14.8 and 11.3; Limerick 3.8 and 11.8; and Waterford 11.2 and 11.2.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 2.1 per 1,000. Among the 6 deaths from all causes for Waterford were 2 from diarrhoea and enteritis of children under 2 years of age.

City of Dublin.—The number of births registered during the week was 241—126 boys and 115 girls. Exclusive of those numbering 36, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 205, representing a rate of 21.7 per 1,000.

The number of deaths registered was 120—65 males and 55 females. Of the total, 11 related to persons belonging to other localities, so that the actual number of deaths for the City was 109, representing a rate of 11.6 per 1,000.

There were 26 deaths from the principal epidemic diseases, comprising one from scarlet fever and 25 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years of age were 24, 11 and 15. There were no deaths from scarlet fever in the three previous weeks.

Tuberculous disease caused 3 deaths (one of which was from pulmonary tuberculosis, one from tuberculous meningitis, and one from tuberculous peritonitis), as against 13, 12 and 7 from all forms of tuberculosis in the three preceding weeks.

Fourteen deaths were caused by cancer, and 14 by diseases of the heart.

There were 2 deaths from pneumonia, comprising one from broncho-pneumonia and one from pneumonia (unspecified). Bronchitis caused 3 deaths.

Among the deaths of infants under one year of age, one was due to tuberculous disease, one to convulsions, one to bronchitis, one to pneumonia, 24 to diarrhoea and enteritis, one to congenital malformation, 2 to congenital debility and 3 to premature birth.

Forty-two of the deaths recorded for the City during the week were those of children under 5 years of age, 39 being infants under one year, 11 of whom were under one month old, and 31 were those of persons aged 65 years and upwards, of whom 25 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 27th September, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population of Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II—Deaths registered during the week ended Saturday, 27th September, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 14.5 and 12.0; City of Dublin 16.3 and 12.8; Borough of Dun Laoghaire 11.4 and 12.1; Cork 9.7 and 11.5; Limerick 11.4 and 8.6; and Waterford 16.8 and 10.7.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 3.3 per 1,000.

City of Dublin.—The number of births registered during the week was 364—190 boys and 174 girls. Exclusive of those numbering 74, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 290, representing a rate of 30.7 per 1,000.

The number of deaths registered was 178—95 males and 83 females. Of the total, 24 related to persons belonging to other localities, so that the actual number of deaths for the City was 154, representing a rate of 16.3 per 1,000.

There were 47 deaths from the principal epidemic diseases, comprising one from typhoid fever, one from diphtheria, and 45 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were one, one and 0, and from diarrhoea and enteritis of children under 2 years of age 11, 15 and 25. There were no deaths from typhoid fever in the three previous weeks.

Tuberculous disease caused 18 deaths (14 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and one from tuberculous peritonitis), as against 12, 7 and 3 from all forms of tuberculosis in the three preceding weeks.

Fifteen deaths were caused by cancer, and 22 by diseases of the heart.

There were 4 deaths from pneumonia, comprising 3 from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused 3 deaths.

Two accidental deaths were registered, one of which was due to drowning.

Among the deaths of infants under one year of age, 2 were due to pneumonia, 42 to diarrhoea and enteritis, one to congenital malformation, 3 to congenital debility, and 11 to premature birth.

Sixty-eight of the deaths recorded for the City during the week were those of children under 5 years of age, 62 being infants under one year, 19 of whom were under one month old, and 35 were those of persons aged 65 years and upwards, of whom 21 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 4th October, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population of Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return. (c) Typhoid fever.

TABLE III.—Cases of infectious diseases notified in the undermentioned urban areas during the week ended Saturday, 4th October, 1941, and during each of the three preceding weeks.

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 11.0 and 11.9; City of Dublin 11.2 and 12.4; Borough of Dun Laoghaire 11.4 and 11.8; Cork 9.0 and 11.0; Limerick 7.6 and 8.3; and Waterford 13.1 and 13.1.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 2.3 per 1,000. Among the 14 deaths from all causes for Cork were 2 from diarrhoea and enteritis of children under 2 years of age. and included in the 7 deaths for Waterford was one from diphtheria.

City of Dublin.—The number of births registered during the week was 249—122 boys and 127 girls. Exclusive of those numbering 45, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 204, representing a rate of 21.6 per 1,000.

The number of deaths registered was 134—64 males and 70 females. Of the total, 28 related to persons belonging to other localities, so that the actual number of deaths for the City was 106, representing a rate of 11.2 per 1,000.

There were 30 deaths from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from this disease were 15, 25 and 45.

Tuberculous disease caused 14 deaths (11 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from tuberculous peritonitis), as against 7, 3 and 18 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 10 by diseases of the heart.

There was one death from broncho-pneumonia. Bronchitis caused 4 deaths.

One accidental death was registered.

Among the deaths of infants under one year of age, one was due to broncho-pneumonia, one to bronchitis, 28 to diarrhoea and enteritis, 3 to congenital malformations, and 3 to premature birth.

Forty-five of the deaths recorded for the City during the week were those of children under 5 years of age, 37 being infants under one year, 8 of whom were under one month old, and 23 were those of persons aged 65 years and upwards, of whom 17 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 11th October, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 9.9 and 11.6; City of Dublin 10.7 and 12.5; Borough of Dun Laoghaire 7.6 and 10.2; Cork 9.0 and 10.6; Limerick 8.9 and 7.9; and Waterford 9.3 and 12.6.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.8 per 1,000. Among the 14 deaths from all causes for Cork was one from whooping cough.

City of Dublin.—The number of births registered during the week was 185—92 boys and 93 girls. Exclusive of those numbering 30, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 155, representing a rate of 16.4 per 1,000.

The number of deaths registered was 114—65 males and 49 females. Of the total, 13 related to persons belonging to other localities, so that the actual number of deaths for the City was 101, representing a rate of 10.7 per 1,000.

There were 23 deaths from the principal epidemic diseases, comprising one from diphtheria and 22 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were 0, one and 0, and from diarrhoea and enteritis of children under 2 years of age 25, 45 and 30.

Tuberculous disease caused 8 deaths (6 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and one from disseminated tuberculosis), as against 3, 18 and 14 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 22 by diseases of the heart.

There were 6 deaths from pneumonia, comprising one from broncho-pneumonia, and 5 from pneumonia (unspecified). Bronchitis caused one death.

Two accidental deaths were registered, one of which was due to burns.

Among the deaths of infants under one year of age, one was due to meningitis, one to convulsions, 4 to pneumonia, 21 to diarrhoea and enteritis, 2 to congenital malformations, 2 to congenital debility, and one to premature birth.

Thirty-seven of the deaths recorded for the City during the week were those of children under 5 years of age, 34 being infants under one year, 5 of whom were under one month old, and 29 were those of persons aged 65 years and upwards, of whom 26 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

PRICE 1½d. NET.

*Oifig an Ard-Chláradóra,
Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 11.8 and 11.8; City of Dublin 12.4 and 12.7; Borough of Dun Laoghaire 8.9 and 9.8; Cork 11.0 and 9.7; Limerick 12.7 and 10.2; and Waterford 11.2 and 12.6.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.9 per 1,000. Among the 10 deaths from all causes for Limerick were one from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age; and included in the 6 deaths for Waterford were 2 from diarrhoea and enteritis of children under 2 years of age.

City of Dublin.—The number of births registered during the week was 219—108 boys and 111 girls. Exclusive of those numbering 36, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 183, representing a rate of 19.4 per 1,000.

The number of deaths registered was 136—70 males and 66 females. Of the total, 19 related to persons belonging to other localities, so that the actual number of deaths for the City was 117, representing a rate of 12.4 per 1,000.

There were 23 deaths from the principal epidemic diseases, comprising one from measles, one from diphtheria and 21 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were one, 0 and one, and from diarrhoea and enteritis of children under 2 years of age 45, 30 and 22. There were no deaths from measles in the three preceding weeks.

Tuberculous disease caused 16 deaths (14 of which were from pulmonary tuberculosis and 2 from disseminated tuberculosis), as against 18, 14 and 8 from all forms of tuberculosis in the three preceding weeks.

Twelve deaths were caused by cancer, and 15 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 4 from broncho-pneumonia, and 2 from lobar pneumonia. Bronchitis caused 4 deaths.

Four accidental deaths were registered, one of which was due to burns.

Among the deaths of infants under one year of age, 4 were due to broncho-pneumonia, 21 to diarrhoea and enteritis, 3 to congenital malformations, one to congenital debility, and 2 to premature birth.

Forty-one of the deaths recorded for the City during the week were those of children under 5 years of age, 35 being infants under one year, 10 of whom were under one month old, and 34 were those of persons aged 65 years and upwards, of whom 27 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 25th October, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population of Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 13.0 and 11.4 City of Dublin 14.0 and 12.1; Borough of Dun Laoghaire 16.5 and 11.1; Cork 17.4; and 11.6; Limerick 5.1 and 8.6; and Waterford 13.1 and 11.7.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.7 per 1,000.

City of Dublin.—The number of births registered during the week was 186—96 boys and 90 girls. Exclusive of those numbering 39, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 147, representing a rate of 15.6 per 1,000.

The number of deaths registered was 145—70 males and 75 females. Of the total, 13 related to persons belonging to other localities, so that the actual number of deaths for the City was 132, representing a rate of 14.0 per 1,000.

There were 22 deaths from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from this disease were 30, 22 and 21.

Tuberculous disease caused 15 deaths (12 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis and one from disseminated tuberculosis), as against 14, 8 and 16 from all forms of tuberculosis in the three preceding weeks.

Fifteen deaths were caused by cancer, and 25 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 6 from broncho-pneumonia, and 3 from lobar pneumonia. Bronchitis caused 5 deaths.

Three accidental deaths were registered, 2 of which were due to injuries caused by motor vehicles.

Among the deaths of infants under one year of age, 2 were due to broncho-pneumonia, 20 to diarrhoea and enteritis, one to congenital malformation, one to premature birth, and one to injury at birth.

Twenty-nine of the deaths recorded for the City during the week were those of children under 5 years of age, 26 being infants under one year, 4 of whom were under one month old, and 47 were those of persons aged 65 years and upwards, of whom 33 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 1st November, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 14.0 and 12.2; City of Dublin 13.5 and 12.7; Borough of Dun Laoghaire 16.5 and 12.4; Cork 9.0; and 11.6; Limerick 11.4 and 9.5; and Waterford 24.2 and 14.5.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.5 per 1,000. Among the 13 deaths from all causes for Dun Laoghaire were one from diphtheria and 2 from diarrhoea and enteritis of children under 2 years of age; and included in the 13 deaths for Waterford were one from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age.

City of Dublin.—The number of births registered during the week was 195—111 boys and 84 girls. Exclusive of those numbering 41, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 154, representing a rate of 16.3 per 1,000.

The number of deaths registered was 149—83 males and 66 females. Of the total, 22 related to persons belonging to other localities, so that the actual number of deaths for the City was 127, representing a rate of 13.5 per 1,000.

There were 15 deaths from the principal epidemic diseases, comprising 2 from measles, one from scarlet fever, 2 from diphtheria, and 10 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 0, one and 0, from diphtheria one, one and 0, and from diarrhoea and enteritis of children under 2 years of age 22, 21 and 22. There were no deaths from scarlet fever in the three preceding weeks.

Tuberculous disease caused 11 deaths (9 of which were from pulmonary tuberculosis, one from tuberculous meningitis and one from disseminated tuberculosis), as against 8, 16 and 15 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 34 by diseases of the heart.

There were 6 deaths from broncho-pneumonia. Bronchitis caused 7 deaths.

Four accidental deaths were registered, 2 of which were due to burns.

Among the deaths of infants under one year of age, one was due to scarlet fever, one to tuberculous meningitis, 2 to bronchitis, 6 to broncho-pneumonia, 9 to diarrhoea and enteritis, one to congenital malformation, and one to congenital debility.

Thirty-five of the deaths recorded for the City during the week were those of children under 5 years of age, 25 being infants under one year, 7 of whom were under one month old, and 40 were those of persons aged 65 years and upwards, of whom 28 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox; measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II—Deaths registered during the week ended Saturday, 8th November, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 12.7 and 12.9; City of Dublin 13.0 and 13.2; Borough of Dun Laoghaire 19.1 and 15.3; Cork 10.3 and 11.9; Limerick 14.0 and 10.8; and Waterford 11.2 and 14.9.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.5 per 1,000. Among the 11 deaths from all causes for Limerick was one from diphtheria, and the 6 deaths for Waterford included one from scarlet fever and one from diarrhoea and enteritis of a child under 2 years of age.

City of Dublin.—The number of births registered during the week was 221—111 boys and 110 girls. Exclusive of those numbering 44, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 177, representing a rate of 18.8 per 1,000.

The number of deaths registered was 138—67 males and 71 females. Of the total, 15 related to persons belonging to other localities, so that the actual number of deaths for the City was 123, representing a rate of 13.0 per 1,000.

There were 16 deaths from the principal epidemic diseases, comprising one from scarlet fever and 15 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from scarlet fever were 0, 0 and one, and from diarrhoea and enteritis of children under 2 years of age 21, 22 and 10.

Tuberculous disease caused 13 deaths (11 of which were from pulmonary tuberculosis one from tuberculous meningitis and one from disseminated tuberculosis), as against 16, 15 and 11 from all forms of tuberculosis in the three preceding weeks.

Seven deaths were caused by cancer, and 31 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 2 from broncho-pneumonia, 2 from lobar pneumonia, and 3 from pneumonia (unspecified). Bronchitis caused 4 deaths.

Two accidental deaths were registered, one of which was due to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, one was due to scarlet fever, one to convulsions, one to bronchitis, 4 to pneumonia, 15 to diarrhoea and enteritis, one to congenital malformation, one to congenital debility, and 2 to premature birth.

Twenty-seven of the deaths recorded for the City during the week were those of children under one year of age, 5 of whom were under one month old, and 47 were those of persons aged 65 years and upwards, of whom 31 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 15th November, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II—Deaths registered during the week ended Saturday, 15th November, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the Principal Towns are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 13.1 and 13.2; City of Dublin 12.7 and 13.3; Borough of Dun Laoghaire 19.1 and 17.8; Cork 12.9 and 12.4; Limerick 16.5 and 11.8; and Waterford 5.6 and 13.5.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.5 per 1,000.

City of Dublin.—The number of births registered during the week was 179—101 boys and 78 girls. Exclusive of those numbering 25, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 154, representing a rate of 16.3 per 1,000.

The number of deaths registered was 140—67 males and 73 females. Of the total, 20 related to persons belonging to other localities, so that the actual number of deaths for the City was 120, representing a rate of 12.7 per 1,000.

There were 22 deaths from the principal epidemic diseases, comprising one from measles, one from scarlet fever, one from whooping cough, 2 from diphtheria, and 17 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 0, 2 and 0; from scarlet fever 0, one and one, from diphtheria 0, 2 and 0, and from diarrhoea and enteritis of children under 2 years of age 22, 10 and 15. There were no deaths from whooping cough in the three previous weeks.

Tuberculous disease caused 12 deaths (11 of which were from pulmonary tuberculosis and one from tuberculous meningitis), as against 15, 11 and 13 from all forms of tuberculosis in the three preceding weeks.

Seven deaths were caused by cancer, and 22 by diseases of the heart.

There were 6 deaths from broncho-pneumonia. Bronchitis caused 7 deaths.

Among the deaths of infants under one year of age, one was due to scarlet fever, one to whooping cough, one to diphtheria, one to measles, 2 to meningitis, 4 to broncho-pneumonia, 17 to diarrhoea and enteritis, 4 to congenital debility, and 3 to premature birth.

Thirty-eight of the deaths recorded for the City during the week were those of children under five years of age, 35 being infants under one year, 7 of whom were under one month old, and 43 were those of persons aged 65 years and upwards, of whom 34 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 22nd November, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

| PRINCIPAL TOWNS | POPULATION (a) | Annual Rate (b) per 1,000 persons | | BIRTHS | DEATHS | BIRTHS | DEATHS | CAUSED BY | | | | | | | | | | | | | | | Inquest Cases | (24) In public institutions | (25) Number uncertified | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

| | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | </ |

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population for Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return.

TABLE II.—Deaths registered during the week ended Saturday, 23rd November, 1941, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

[illegible]

TABLE III.—Cases of infectious diseases notified in the undermentioned urban areas during the week ended Saturday, 22nd November, 1941, and during each of the three preceding weeks.

| AREAS | Week ended | Typhoid fever | Scarlet fever | Whooping cough | Diphtheria | Tuberculosis | Smallpox | Measles | Typhus | Acute Primary Pneumonia and Acute Influenzal Pneumonia | Other diseases* | TOTAL |

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Principal Towns 12.5 and 13.1; City of Dublin 11.2 and 12.6; Borough of Dun Laoghaire 17.8 and 18.1; Cork 13.6 and 11.5; Limerick 10.2 and 13.0; and Waterford 20.5 and 15.4.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.9 per 1,000. The 8 deaths from all causes for Limerick included one from typhoid fever and one from diarrhoea and enteritis of a child under 2 years of age.

City of Dublin.—The number of births registered during the week was 230—130 boys and 100 girls. Exclusive of those numbering 39, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 191, representing a rate of 20.3 per 1,000.

The number of deaths registered was 129—63 males and 66 females. Of the total, 23 related to persons belonging to other localities, so that the actual number of deaths for the City was 106, representing a rate of 11.2 per 1,000.

There were 11 deaths from the principal epidemic diseases, comprising 2 from measles, one from diphtheria, and 8 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 2, 0 and 1; from diphtheria 2, 0 and 2, and from diarrhoea and enteritis of children under 2 years of age 10, 15 and 17.

Tuberculous disease caused 8 deaths (7 of which were from pulmonary tuberculosis and one from tuberculous meningitis), as against 11, 13 and 12 from all forms of tuberculosis in the three preceding weeks.

Twelve deaths were caused by cancer, and 20 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 5 from broncho-pneumonia and one from lobar pneumonia. Bronchitis caused 4 deaths.

Four accidental deaths were registered, 2 of which were due to injuries caused by motor vehicles.

Among the deaths of infants under one year of age, 2 were due to measles, one to convulsions, 3 to broncho-pneumonia, 7 to diarrhoea and enteritis, 2 to congenital debility, and 3 to premature birth.

Twenty-two of the deaths recorded for the City during the week were those of children under five years of age, 19 being infants under one year, 2 of whom were under one month old, and 40 were those of persons aged 65 years and upwards, of whom 25 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 29th November, 1941, for the Principal Towns of Eire, with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 12.2 and 12.6; City of Dublin 11.9 and 12.2; Borough of Dun Laoghaire 17.8 and 18.5; Cork 8.4 and 11.3; Limerick 15.2 and 14.0; and Waterford 20.5 and 14.5.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.4 per 1,000. Among the 12 deaths from all causes for Limerick was one from typhoid fever; and the 11 deaths for Waterford included one from diphtheria.

City of Dublin.—The number of births registered during the week was 272—139 boys and 133 girls. Exclusive of those numbering 51, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 221, representing a rate of 23.4 per 1,000.

The number of deaths registered was 124—65 males and 59 females. Of the total, 12 related to persons belonging to other localities, so that the actual number of deaths for the City was 112, representing a rate of 11.9 per 1,000.

There were 4 deaths from the principal epidemic diseases, comprising one from typhoid fever, one from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were 0, 2 and one, and from diarrhoea and enteritis of children under 2 years of age 15, 17 and 8. There were no deaths from typhoid fever in the three previous weeks.

Tuberculous disease caused 13 deaths (10 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis and one from disseminated tuberculosis), as against 13, 12 and 8 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were caused by cancer, and 24 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 7 from broncho-pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 3 deaths.

Three accidental deaths were registered, one of which was due to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, one was due to diphtheria, 5 to pneumonia, 2 to diarrhoea and enteritis, one to congenital malformation, 2 to congenital debility and 3 to premature birth.

Twenty of the deaths recorded for the City during the week were those of children under five years of age, 16 being infants under one year, 9 of whom were under one month old, and 49 were those of persons aged 65 years and upwards, of whom 36 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

(a) According to Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941. The population of Belfast is estimated to the 1st January, 1940, and that for Derry is according to the Census of 1937. (b) The annual rates for the urban districts will be shown in the quarterly return. (c) Typhoid fever

Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 12.9 and 12.7; City of Dublin 13.9 and 12.4; Borough of Dun Laoghaire 14.0 and 17.2; Cork 12.3 and 11.8; Limerick 10.2 and 13.0; and Waterford 9.3 and 14.0.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.8 per 1,000. Among the 3 deaths from all causes for Tralee was one from typhoid fever.

City of Dublin.—The number of births registered during the week was 214—104 boys and 110 girls. Exclusive of those numbering 52, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 162, representing a rate of 17.2 per 1,000.

The number of deaths registered was 148—76 males and 72 females. Of the total, 17 related to persons belonging to other localities, so that the actual number of deaths for the City was 131, representing a rate of 13.9 per 1,000.

There were 8 deaths from the principal epidemic diseases, comprising 2 from diphtheria, and 6 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were 2, one and one, and from diarrhoea and enteritis of children under 2 years of age 17, 8 and 2.

Tuberculous disease caused 19 deaths (all of which were from pulmonary tuberculosis), as against 12, 8 and 13 from all forms of tuberculosis in the three preceding weeks.

Eight deaths were caused by cancer, and 25 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 3 from broncho-pneumonia, 3 from lobar pneumonia, and one from pneumonia (unspecified). Bronchitis caused 12 deaths.

Five accidental deaths were registered.

Among the deaths of infants under one year of age, one was due to bronchitis, 3 to pneumonia, 6 to diarrhoea and enteritis, one to congenital malformation, one to congenital debility, and 6 to premature birth.

Twenty-one of the deaths recorded for the City during the week were those of children under five years of age, 18 being infants under one year, 5 of whom were under one month old, and 45 were those of persons aged 65 years and upwards, of whom 33 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 13th December, 1941, for the Principal Towns of Éire, with similar particulars for BELFAST and DERRY.

| PRINCIPAL TOWNS | POPULA- TION (a) | Annual Rate (b) per 1,000 persons | | DEATHS | | | | | | | | | | | | | | BIRTHS | | DEATHS | | BIRTHS | | CAUSED BY | | | | | | | | | | | | | | Inquest Cases | In public institutions | Number uncertified | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 12.4 and 12.5; City of Dublin 11.7 and 12.2; Borough of Dun Laoghaire 6.4 and 14.0; Cork 17.4 and 12.9; Limerick 14.0 and 12.4; and Waterford 14.9 and 16.3.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.8 per 1,000. Among the 27 deaths from all causes for Cork were 2 from diarrhoea and enteritis of children under 2 years of age.

City of Dublin.—The number of births registered during the week was 316—182 boys and 134 girls. Exclusive of those numbering 56, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 260, representing a rate of 27.6 per 1,000.

The number of deaths registered was 128—61 males and 67 females. Of the total, 18 related to persons belonging to other localities, so that the actual number of deaths for the City was 110, representing a rate of 11.7 per 1,000.

There were 8 deaths from the principal epidemic diseases, comprising one from measles, 5 from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 2, 0 and 0, from diphtheria one, one and 2, and from diarrhoea and enteritis of children under 2 years of age 8, 2 and 6.

Tuberculous disease caused 14 deaths (9 of which were from pulmonary tuberculosis, one from tuberculous meningitis, 2 from tuberculous peritonitis, and 2 from disseminated tuberculosis), as against 8, 13 and 19 from all forms of tuberculosis in the three preceding weeks.

Six deaths were caused by cancer, and 22 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar pneumonia, and one from pneumonia (unspecified). Bronchitis caused 9 deaths.

Among the deaths of infants under one year of age 2 were due to meningitis, one to convulsions, one to bronchitis, 6 to pneumonia, 2 to diarrhoea and enteritis, one to congenital debility, and 3 to premature birth.

Twenty-five of the deaths recorded for the City during the week were those of children under five years of age, 16 being infants under one year, 3 of whom were under one month old, and 33 were those of persons aged 65 years and upwards, of whom 26 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 20th December, 1941, for the Principal Towns of Éire, with similar particulars for BELFAST and DERRY.

Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Éire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 9.8 and 11.8; City of Dublin 11.2 and 12.2; Borough of Dun Laoghaire 3.8 and 10.5; Cork 7.7 and 11.5; Limerick 2.8 and 10.8; and Waterford 7.5 and 13.1.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 0.3 per 1,000.

City of Dublin.—The number of births registered during the week was 108—57 boys and 51 girls. Exclusive of those numbering 22, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 86, representing a rate of 9.1 per 1,000.

The number of deaths registered was 124—60 males and 64 females. Of the total, 17 related to persons belonging to other localities, so that the actual number of deaths for the City was 107, representing a rate of 11.3 per 1,000.

There were 4 deaths from the principal epidemic diseases, comprising 2 from diphtheria and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were one, 2 and 5, and from diarrhoea and enteritis of children under 2 years of age 2, 6 and 2.

Tuberculous disease caused 9 deaths (5 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and one from disseminated tuberculosis), as against 13, 19 and 14 from all forms of tuberculosis in the three preceding weeks.

Seven deaths were caused by cancer, and 26 by diseases of the heart.

There were 12 deaths from pneumonia, comprising 9 from broncho-pneumonia, one from lobar pneumonia, and 2 from pneumonia (unspecified). Bronchitis caused 6 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year of age one was due to diphtheria, one to bronchitis, 8 to pneumonia, 2 to diarrhoea and enteritis, one to congenital debility, and 5 to premature birth.

Twenty-six of the deaths recorded for the City during the week were those of children under five years of age, 24 being infants under one year, 8 of whom were under one month old, and 44 were those of persons aged 65 years and upwards, of whom 38 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 27th December, 1941, for the Principal Towns of Éire, with similar particulars for BELFAST and DERRY.

Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned so far as possible to the area of residence and those of non-residents of Eire have been excluded.

The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Principal Towns 17.1 and 13.1; City of Dublin 16.8 and 13.4; Borough of Dun Laoghaire 19.1 and 10.8; Cork 22.6 and 15.0; Limerick 25.4 and 13.4; and Waterford 11.2 and 10.7.

The deaths from the principal epidemic diseases* recorded for the thirteen principal towns last week were represented by an annual rate of 1.3 per 1,000. Among the 20 deaths from all causes for Limerick were 3 from diarrhoea and enteritis of children under 2 years of age.

City of Dublin.—The number of births registered during the week was 332—180 boys and 152 girls. Exclusive of those numbering 65, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 267, representing a rate of 28.3 per 1,000.

The number of deaths registered was 177—81 males and 96 females. Of the total, 19 related to persons belonging to other localities, so that the actual number of deaths for the City was 158, representing a rate of 16.8 per 1,000.

There were 15 deaths from the principal epidemic diseases, comprising one from measles, one from scarlet fever, one from whooping cough, 3 from diphtheria and 9 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 0, one and 0, from diphtheria, 2, 5 and 2, and from diarrhoea and enteritis of children under 2 years of age, 6, 2 and 2. There were no deaths from scarlet fever or whooping cough in the three preceding weeks.

Tuberculous disease caused 16 deaths (15 of which were from pulmonary tuberculosis and one from tuberculous meningitis), as against 19, 14 and 9 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were caused by cancer, and 45 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 2 from broncho-pneumonia, 2 from lobar pneumonia, and 2 from pneumonia (unspecified). Bronchitis caused 11 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year of age, one was due to whooping cough, one to measles, 2 to convulsions, one to bronchitis, 2 to pneumonia, 9 to diarrhoea and enteritis, one to congenital malformation, 2 to congenital debility, and 2 to premature birth.

Twenty-eight of the deaths recorded for the City during the week were those of children under five years of age, 21 being infants under one year, 7 of whom were under one month old, and 61 were those of persons aged 65 years and upwards, of whom 48 were aged 70 years or over.

CASES OF INFECTIOUS DISEASES.—Table III shows the numbers notified in the City of Dublin and in the Boroughs; and Table IV the number of cases of certain diseases treated in Dublin Hospitals.

* Typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 3rd January, 1942, for the Principal Towns of Éire, with similar particulars for BELFAST and DERRY.
